Capacity building and opportunities

An introduction by Lars-Gunnar Lundh, SIS

Aim and ambition of the conference

- Build awareness about standardisation as the engine to increase climate-related trade for the development countries
- To introduce more extensive activities to develop the capacity within those countries to take advantage of the increasing climate-related trade.

Why? - The importance of a global involvement

- Standardisation is a central key for trade and influence on the world market
- Standardisation affects the competitiveness and growth
- The legitimacy of international standards is dependent on consideration of realities and priorities in developing countries

The challenge of capacity building in Sweden

- NSB mobilisation of national stakeholders
- Preparations at national level before ISO meetings and workshops
- Experience among national stakeholders of international standardisation
- Institutions to secure implementation and long-term adaptation of international standards
