Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 22315:2014 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 22315:2014.

The International Standard ISO 22315:2014 has the status of a Swedish Standard. This document contains the official version of ISO 22315:2014.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/TC 223, *Societal security*.

Introduction

This International Standard provides guidance on planning for mass evacuation. An evacuation in response to a risk or threat is the movement of people from a designated area. In this context a mass evacuation is characterized by the need for multi-agency collaboration and resources. Typically this involves a larger number of people or wider area at risk. It is difficult to define mass evacuation in terms of numbers or scale because disasters, communities and responder capabilities differ. However, it can be considered in terms of the number of evacuees exceeding an everyday scale of response such as the evacuation of a city, region or large populated area.

The need for evacuation can arise from naturally occurring events, human induced events (both intentional and unintentional) and events caused by technological failures. Some events require an immediate evacuation while others give advanced warning.

Effective planning is important to help save human life and reduce suffering. Planning helps to deliver an effective response and is part of emergency management. This International Standard provides guidance for developing mass evacuation plans, supporting decision-making, increasing the potential for an effective response, and strengthening preparedness of the public and organizations. It also recognizes that there are barriers that could hinder people from evacuating, such as concern for pets, valuable possessions or items that sustain livelihoods.

This International Standard is intended for use by those responsible for establishing mass evacuation plans as well as preparing locations to receive evacuees on a mass scale. It includes the following eight activities that also provide the structure to the eight clauses in this International Standard ([Clauses 4 to 11](#)), the order of which does not necessarily suggest a sequence.

Table 1 — [Clauses 4-11](#) in this International Standard

General aspects for mass evacuation planning (Clause 4)						
Prepare the public for mass evacuation (Clause 5)	Visualize the areas that are at risk or affected (Clause 6)	Make the evacuation decision (Clause 7)	Public warning (Clause 8)	Analyse evacuee movement (Clause 9)	Assess evacuee shelter requirements (Clause 10)	Evaluate and continually improve (Clause 11)

[Table 1](#) illustrates that there are some general aspects for mass evacuation planning ([Clause 4](#)) (for example, risk assessment and exercising) and these support the provisions contained in [Clauses 5 to 11](#). A plan to prepare the public to react effectively ([Clause 5](#)) and a plan to understand and visualize an area at risk and/or an affected area ([Clause 6](#)) provide decision-makers with information to enable them to decide whether to call for an evacuation. A plan to make the decision to call for an evacuation ([Clause 7](#)) aims to ensure that the decision-making process, objectives and participants are appropriate. A plan to warn the public of the need to react as advised ([Clause 8](#)) considers protocols for communication and community-based warning systems. Plans also consider the analysis of evacuee movement to an area of safety ([Clause 9](#)), for example, to understand transportation needs, demands and availability. Plans also aim to assess evacuee shelter requirements ([Clause 10](#)). For example, they can identify the demand for shelters and establish agreements to provide shelters. A plan for evaluating and continually improving evacuation plans ([Clause 11](#)) concludes this International Standard.

While this International Standard recognizes the importance of stabilizing the affected area after an evacuation, as well as the importance of protecting property and preserving the environment, these aspects are not its main focus.

Societal security — Mass evacuation — Guidelines for planning

1 Scope

This International Standard provides guidelines for mass evacuation planning in terms of establishing, implementing, monitoring, evaluating, reviewing and improving preparedness. It establishes a framework for each activity in mass evacuation planning for all identified hazards. It will help organizations to develop plans that are evidence-based and that can be evaluated for their effectiveness.

This International Standard is intended for use by organizations with responsibility for, or involvement in, part or all of the planning for mass evacuation. It is applicable to all types and sizes of organizations that are involved in the planning for mass evacuation, such as local, regional, and national governments; statutory bodies; international and non-governmental organizations; businesses; and public and social groups.

This International Standard covers planning for mass evacuation in order to gain a more effective response during the actual evacuation. It will assist organizations to meet their obligation of saving human life and reducing suffering.

This International Standard does not cover activities to stabilize the affected area after an evacuation, protect property and preserve the environment.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 22300, *Societal security — Terminology*

ISO 22320, *Societal security — Emergency management — Requirements for incident response*

ISO 22322, *Societal Security — Emergency management — Public warning*

ISO 22398, *Societal security — Guidelines for exercises*

ISO 31000, *Risk management — Principles and guidelines*

ISO/IEC 31010, *Risk management — Risk assessment techniques*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 22300 and the following apply:

3.1

incident management system

system that defines the roles and responsibilities of personnel and the operating procedures to be used in the management of incidents

3.2

preparedness

knowledge and capacities developed to effectively anticipate, respond to, and recover from the impact of likely imminent or current hazard events or conditions

3.3 community-based warning system

method to communicate information to the public through established networks

3.4 area at risk

location that could be affected by a disaster

Note 1 to entry: The term is more relevant to preventative evacuations

3.5 affected area

location that has been impacted by a disaster

Note 1 to entry: The term is more relevant to immediate evacuations

4 General aspects for mass evacuation planning

4.1 Introduction

The organization should develop, implement and document transparent decision-making processes, some of which are common across all activities for mass evacuation planning. [Clause 4](#) details planning issues which are common across [Clauses 5](#) to [11](#), including:

- risk assessment ([4.2](#));
- compliance with legislations and policies ([4.3](#));
- information gathering and analysis ([4.4](#));
- planning operational resource allocation ([4.5](#));
- planning and documenting processes ([4.6](#));
- effective multi-agency partnering arrangements ([4.7](#));
- training and exercising ([4.8](#)).

4.2 Risk assessment

The organization should develop processes for risk management which includes performing a risk assessment in accordance with ISO 31000 and ISO/IEC 31010. The risk assessments should be:

- strategic (determining the risks associated with when to order an evacuation) or tactical (deciding to evacuate an area with a high proportion of vulnerable people, thereby creating a higher risk of being unable to evacuate them in time);
- conducted for specific locations (including the shelter area);
- conducted for known risks and their different evacuation scenarios;
- conducted before, during and after an evacuation to understand how the situation changes over time in terms of the hazard, population, infrastructure and transportation;
- used to influence resource management and the evacuation response;
- updated during an incident as new data are received from different sources.

4.3 Compliance with legislation and policies

The organization should be aware of all applicable legislation and relevant policies and develop plans for mass evacuation that are consistent with their requirements.

The organization should use applicable legislation and policies operating at international, national, regional and local levels. These should:

- be used to plan for mass evacuation and inform the plans, activities, decisions and models developed;
- be consulted to understand what can and cannot be done to protect the public;
- consider situations where people decide not to evacuate and to determine the risks;
- consider the responsibilities of different organizations during a mass evacuation and the regulations that govern these organizations;
- be used to document and demonstrate how to limit the organization's liability and the damage to its reputation;
- be monitored regularly as part of the planning process to identify changes that could affect the mass evacuation plan.

4.4 Information gathering and analysis

The organization should gather information from multiple sources of planning information and consider the value of each aspect. The information gathered should include the following:

- the demographics of people in an area at risk;
- the proportion of people who would take their own evacuation transport;
- the people who would use evacuation shelters.

The organization should assess the quality of information gathered, determine its reliability and potential long and short-term consequences, and its influence on the evacuation decision, using the following criteria:

- the frequency with which the information is updated;
- the source of the information;
- the methods used to gather the information;
- the level of detail available in the information.

The organization should assess the reliability and credibility of information in accordance with the procedure in ISO 22320.

The organization should use existing or new research information to enable an evidence-based approach to mass evacuation planning. Sources of existing research can include the following:

- academic research;
- pre-evacuation and post-evacuation surveys;
- practitioner reports;
- post-disaster reports;
- post-exercise reports;
