SVENSK STANDARD
SS-ISO 16760:2015

Fastställd/Approved: 2015-01-19
Publicerad/Published: 2015-01-22
Utgåva/Edition: 1
Språk/Language: engelska/English
ICS: 35.240.30; 37.100.99

Grafisk teknik – Informationshantering för prepress – Framställning och visualisering av RGB-bilder för användning i RGB-baserade grafiska arbetsflöden (ISO 16760:2014, IDT)

Graphic technology – Prepress data exchange – Preparation and visualization of RGB images to be used in RGB-based graphics arts workflows (ISO 16760:2014, IDT)

Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka
Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet
Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standard-paket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete
Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence
As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work
We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception
With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 16760:2014 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 16760:2014.

The International Standard ISO 16760:2014 has the status of a Swedish Standard. This document contains the official version of ISO 16760:2014.

Upplysningar om sakinnehållet i standarden lämnas av SIS, Swedish Standards Institute, telefon 08-555 520 00. Standarder kan beställas hos SIS Förlag AB som även lämnar allmänna upplysningar om svensk och utländsk standard.

Information about the content of the standard is available from the Swedish Standards Institute (SIS), telephone +46 8 555 520 00. Standards may be ordered from SIS Förlag AB, who can also provide general information about Swedish and foreign standards.

Denna standard är framtagen av kommittén för Grafisk teknik, SIS/TK 434.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på www.sis.se - där hittar du mer information.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: Foreword — Supplementary information.

The committee responsible for this document is ISO/TC 130, *Graphic technology*.

Introduction

This International Standard provides guidelines for image preparation and print simulation in a graphic arts print workflow using RGB images (RGB workflow).

Digital still camera (DSC) images have now largely replaced film in the prepress stage of graphic arts printing and most images printed originate from digital cameras. Standard document exchange using PDF/X-4 and PDF/X-5 formats supports the use of RGB content and provides a 'late binding' printing solution where colour conversion is performed only when the document is printed. In this way, all of the original image data can be retained and the conversion for print can be optimised based on the original image content, key image attributes, and the available press colour gamut. These standard document formats provide an ideal framework for RGB workflow.

The current best practice for image preparation is to view and adjust images on display. When RGB images are adjusted, proofing mode is selected for a reference printing condition and a calibrated monitor is used. In this way, users can see an accurate preview of the printed result. This workflow is shown in Figure 1.

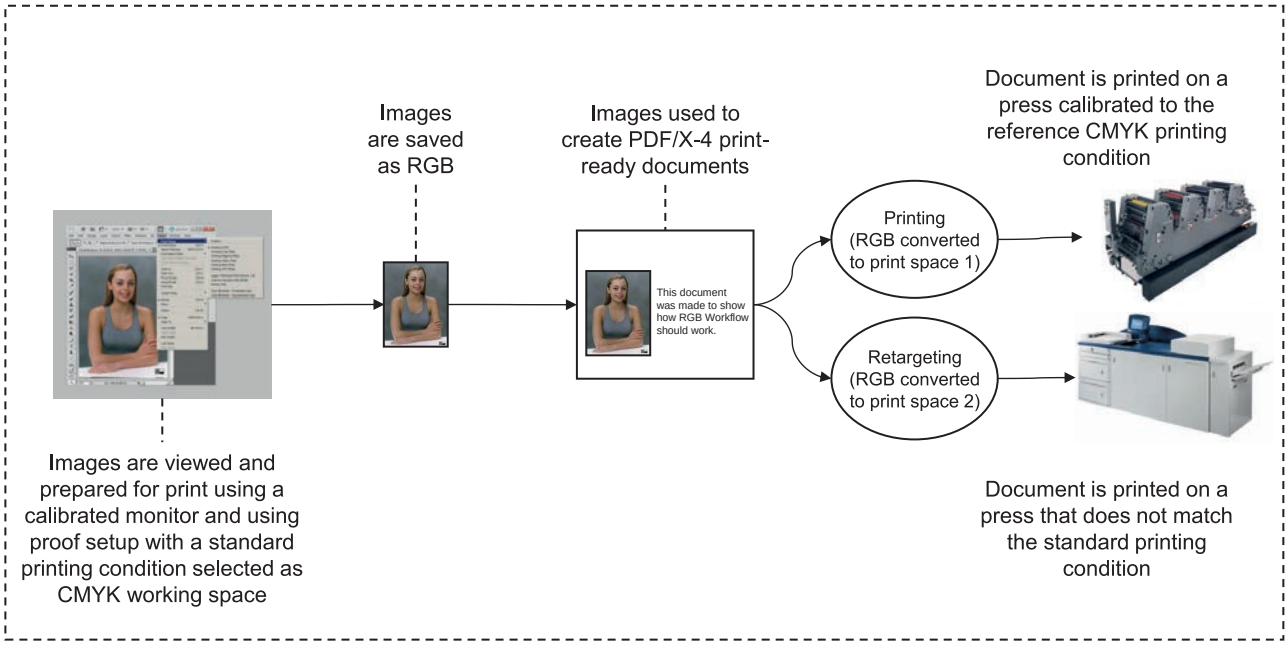

Figure 1 — Current best practice RGB workflow

There are a number of limitations in this workflow:

— Although it is possible to set up a calibrated monitor and viewing environment defined by Adobe RGB (1998) Colour Image Encoding or ISO/IEC 61966-2-1, it is not usually the case that all stakeholders have a calibrated monitor and the same viewing conditions. In the proposed RGB workflow, an RGB Reference Print can be shared easily among stakeholders.

— For inexperienced users, critical colour judgement on screen is harder than on print and so the resulting colour might not be what the user desires. The proposed RGB workflow is described for both experts and inexperienced users.

— The intended printing condition needs to be communicated to every stakeholder by independent means and all users need to know how to set up a viewing environment appropriate to the printing condition. In the proposed RGB workflow, the intended printing condition is included as metadata with the image.

— The approval status of an image is not clearly shown. In the proposed RGB workflow, the approval status is included as metadata with the image.

The proposed RGB workflow addresses these limitations as shown in Figure 2. In this RGB workflow, candidate images are printed on an RGB Reference Printer that has been calibrated to produce an accurate simulation of the intended printing condition. These printed images are checked in a controlled print viewing environment and, if necessary, further adjustments are made until the intended print result is achieved. When RGB image files are created and checked in this way, metadata that describes the intended printing condition and the image approval status is added.

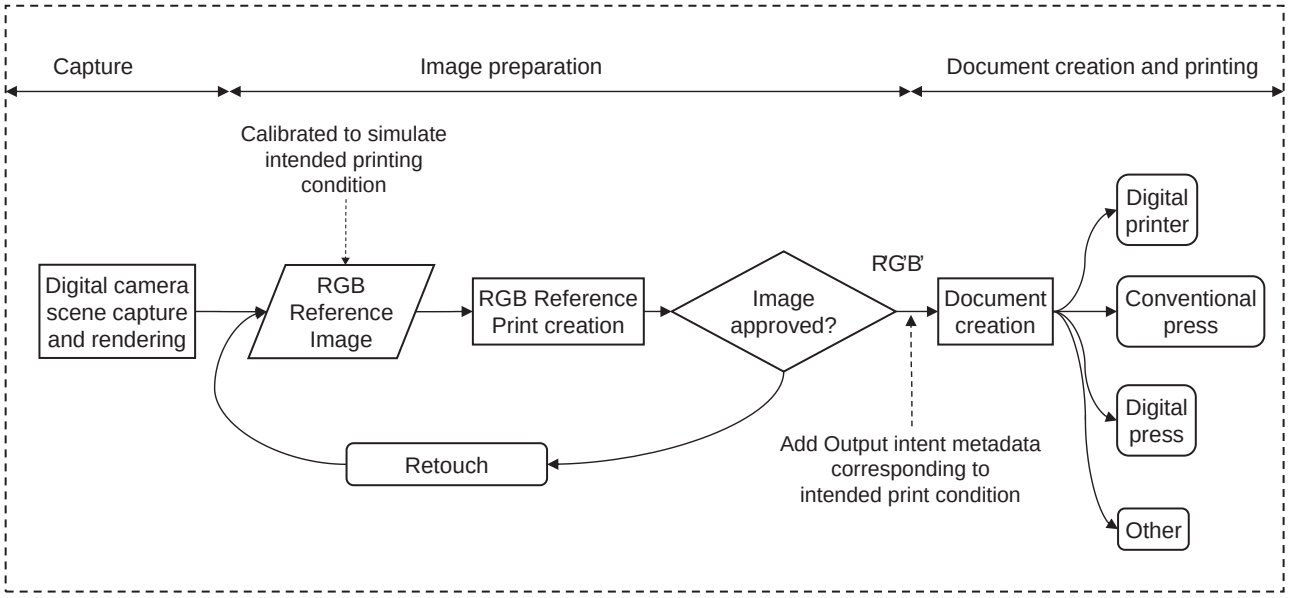

Figure 2 — RGB workflow from scene to printing via RGB image data

Careful preparation of RGB images holds the key to a successful RGB workflow. There are a number of aspects to consider when preparing images for print, including the identification of image highlight and shadow points and the careful mapping of important image colours into the colour gamut of the printing press. Since most printing processes have a significantly different colour gamut size and shape from the set of colours represented in an image, care needs to be taken when editing images so that important colours are retained. This is done most effectively by associating the RGB image with a CMYK press profile. This International Standard describes how to prepare these RGB images. Figure 2 shows the RGB workflow described by this International Standard and R'G'B' is the prepared RGB image.

NOTE For the proposed workflow, although a calibrated soft proof viewing environment is not required, the calibration of a reference printer is required and this print needs to be viewed in a standard calibrated viewing environment. If possible, printers with automatic calibration need to be used in cases where users are not familiar with the calibration process.

When this workflow is adopted, images can be prepared and incorporated in documents which can be printed on multiple printing systems producing prints with a similar appearance.

When the RGB image data are approved based on a hardcopy print, consistent judgement can be made.

This workflow is supported by the PDF/X-4 and PDF/X-5 standard document formats. Documents are expected to be approved using ISO 12647-8 (validation print) or ISO 12647-7 (contract proof).

It is envisaged that printing systems will be developed to produce prints that conform to this International Standard. It can be the case that systems that already conform to the requirements of ISO 12647-8 or ISO 12647-7 will be extended to produce RGB Reference Prints. Such systems will provide an easy means for users to ensure that images and the documents that include these images are printed reliably.

This workflow relates to images that are destined for four-colour commercial printing. Photographers need to be aware that alternative file versions of an image can still be required for specialized printing conditions.

Annex D provides further details of key RGB workflow concepts.

Graphic technology — Prepress data exchange — Preparation and visualization of RGB images to be used in RGB-based graphics arts workflows

1 Scope

This International Standard specifies requirements for an RGB workflow for graphic arts printing based on the use of reflection prints (RGB Reference Prints) as the evaluation vehicle for coloured images. It provides guidelines on the creation of print-targeted RGB images (RGB Reference Images) and simulation prints.

This International Standard requires the identification of a pair of ICC profiles for each image: an image profile and a profile describing the reference printing system. These profiles provide individual colour transformations for gamut mapping and colour separation. This International Standard does not provide any guidance as to how these gamut mapping or colour separation transforms can be specified.
