Innovationsledning – Del 6: Ledning av idégenereringsprocesser

Innovation management – Part 6: Creativity management

Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Denna tekniska specifikation är inte en svensk standard. Detta dokument innehåller den engelska språkversionen av CEN/TS 16555-6:2014.

This Technical Specification is not a Swedish Standard. This document contains the English version of CEN/TS 16555-6:2014.

TECHNISCHE SPEZIFIKATION

CEN/TS 16555-6

December 2014

ICS 03.100.40; 03.100.50

English Version

Innovation management - Part 6: Creativity management

Management de l'innovation - Partie 6 : Management de la
créativité

Innovationsmanagement - Teil 6: Kreativitätsmanagement

This Technical Specification (CEN/TS) was approved by CEN on 27 October 2014 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (CEN/TS 16555-6:2014) has been prepared by Technical Committee CEN/TC 389 “Innovation Management”, the secretariat of which is held by AENOR.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document is not intended for the purpose of certification.

The CEN/TS 16555 series consists of the following parts with the general title *Innovation management*:

- *Part 1: Innovation Management System;*
- *Part 2: Strategic intelligence management;*
- *Part 3: Innovation thinking;*
- *Part 4: Intellectual property management;*
- *Part 5: Collaboration management;*
- *Part 6: Creativity management;*
- *Part 7: Innovation management assessment.*

Part 7 is in preparation.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to announce this Technical Specification: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

Innovation is the implementation of a new or significantly improved product, service, process or working practice. This includes new marketing methods and business models. The critical step on the road to innovation is the idea or inspiration that provides the impetus to commit the time and resources necessary to bring it to fruition.

This document focuses on the creation and identification of new ideas and opportunities that can lead to innovation. It outlines the conditions necessary to inspire ideas and their subsequent collection, selection and development. In keeping with the emphasis of this Technical Specification, particular attention is given to idea generation within small and medium-sized enterprises (SMEs), their organizational structures and needs.

Different levels of innovation are considered: incremental, radical and disruptive, and the implications of each level for organizations and their innovation management systems. Case studies are included in Annex A to provide insight through the experience of others. Collaboration is often essential to the successful inception and development of new ideas, and is covered in more depth in CEN/TS 16555-5, *Innovation management — Part 5: Collaboration management*. In addition, this document complements CEN/TS 16555-3, *Innovation management — Part 3: Innovation thinking*.

1 Scope

This Technical Specification provides guidance for managing the process of originating new ideas from which innovations may be developed.

It is applicable to all types of organization including manufacturing and services industries, the voluntary sector, governmental and social enterprise but with a particular focus on small- and medium-sized enterprises (SMEs).

The guidance in this TS covers issues to be considered by those responsible for managing innovation, in particular during the creative phase, and the sourcing of ideas from within and outside the organization.

This document is one of six parts that support Part 1 of the series, CEN/TS 16555-1, *Innovation management — Part 1: Innovation management system*.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

CEN/TS 16555-1, *Innovation Management — Part 1: Innovation Management System*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in CEN/TS 16555-1 and the following apply.

3.1

creativity

process of generating new ideas through original thinking

Note 1 to entry: This can range from an artistic design to an invention and includes, for example, new business ideas and management processes.

3.2

disruptive innovation

new technology that has the potential to make the current practice obsolete or create a new one

Note 1 to entry: The novelty of such ideas, however, can mean slow adoption by the market and so carries greater risk for the innovator. Examples include the bagless vacuum cleaner and tablet computer.

3.3

incremental innovation

repeated small improvements to a product, service or process over time to improve revenue, efficiency and working practices

3.4

radical innovation

step change in current practice that introduces something new to the world

Note 1 to entry: Often results in replacing existing technology or methods, for example, the internet.

4 Understanding creativity within an organization

CEN/TS 16555-1:2013, 11.6, briefly describes creativity management and how it is possible to successfully manage creativity by following a clear set of principles that stimulate the generation of new ideas; this document provides more detail.

It is important to distinguish between creativity and innovation within the context of working within an organization. Creativity is the process of identifying problems and the generation of ideas to solve those problems whereas innovation involves the selection, development and successful implementation of creative ideas.

Managing creativity requires a different approach to managing other functions within an organization. The management activity should be confined to the support structure and mechanisms around creativity and not the process of creativity itself. However, setting up the conditions that are the most conducive to people having new ideas does not guarantee that they will. Ideas occur to people under a wide variety of circumstances, for example, through chance, through working hard on a problem or while relaxing. Ideas can also be generated from interactions with colleagues, customers, researchers and other stakeholders. Wherever and however ideas occur, they should be written down or recorded so they are not lost.

A hands-off approach allows those thinking and working, individually or collectively, to find a productive methodology. This can involve being challenged by their peers. However, challenge from those in authority or from a fiscal perspective can have a negative effect. Constructive criticism can be as powerful a motivator as approval.

5 Creative leadership and setting policy

The process of generating creative ideas is integral to a wider ongoing innovation management process (see also CEN/TS 16555-1:2013, Clause 8). As such it should be embedded in an organization's policy, sanctioned and supported by the organization's leadership and accepted by staff and other stakeholders. The leadership should define the reasons for idea creation and the scale of its ambition. This in turn should lead to:

- selecting the best person(s) to manage the creative process;
- fostering a culture conducive to the generation of new ideas;
- determining available competencies and the need for additional training/support;
- defining the level of innovation being sought (incremental, radical or disruptive);
- the allocation of suitable and sufficient resources; and
- deciding from whom and from where ideas will be sourced.

6 Managing the creative process

In line with the organization's policy, the leadership should decide if new ideas are to be sought from within the organization, from affiliated organizations or from outside the organization. One strategy is to find and adapt proven innovations developed by other organizations in different territories, markets or spheres of operation (see A.2, Case study 2).

If from outside, then sources should include:

- selected synergistic organizations: consultants, partners, suppliers and others in the value chain (see A.2, Case study 3);

- a wider group as part of an open innovation 'call', 'competition' or 'commission' to innovation support agencies and consultants;
- individuals on a mass scale, for example, through crowd-sourcing which is the process of soliciting ideas from the public or non-expert group.

If from within the organization then:

- it should be decided if employees should spend time generating ideas in company time or in their own time;
- if in company time, resources should be allocated on a time and/or monetary basis against which employees can log, thereby legitimizing the activity.

It is important to match the people in the organization from whom ideas are to be sourced, to the innovation outcome being sought. For example, if improvements to working practices, productivity or management of the organization are required, then all members of the organization can be involved. Alternatively, for a technologically complex problem it may be better to seek ideas from an expert or a multidisciplinary team.

Ideas can be sought from within an organization in a number of ways by, for example:

- an open policy encouraging employees or others to submit ideas at any time;
- a general call, where the management positively seeks ideas from employees on any subject;
- providing stimulus material or a brief in the form of identified market needs, response to competitors, new technology developments, changes in economic, legal or societal circumstances;
- staging creative events to brainstorm ideas and opportunities around specific issues; or
- a brief focused on a specific problem/opportunity that needs a realizable solution within a time frame.

NOTE In Nordic countries, the introduction of employee driven innovation programmes ensure that all of an organization's personnel are involved in the process of innovation. As a result, all available knowledge, skill and competence is engaged in workplace innovation.

7 Types of creative ideas

7.1 General

There are two types of creative idea:

- 1) those that identify a need (a need in search of an answer); and
- 2) those providing a solution (an answer in search of a need).

Each is as valid as the other and can occur independently. People can be good at one, or the other or both. How the human brain conceives ideas is subject to much research but it is clear that through the assimilation of knowledge, experience and first-hand observation, novel and unexpected connections can occur. It is advisable therefore to expose people to the widest range of stimuli and information, both inside and outside their areas of expertise. For example subscribing to trade and technical journals/newsletters, attending seminars and conferences in parallel or related spheres of activity. (Stimulus for ideas can be provided by strategic intelligence, which is dealt with in more detail in CEN/TS 16555-2).
