SS-ISO 18878:2004

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 18878 was prepared by Technical Committee ISO/TC 214, *Elevating work platforms*.

Introduction

This International Standard is one of a series of standards produced by ISO/TC 214 regarding standardization of terminology and general principles for training operators (drivers) of elevating work platforms used to raise (elevate) and position personnel (and related work tools and materials) to a work position where a work task is to be performed. It is intended that each local jurisdiction use this International Standard to develop detailed training requirements particular to the local conditions.

Mobile elevating work platforms — Operator (driver) training

1 Scope

This International Standard provides methods to prepare training materials and to administer training to operators (drivers) of Mobile Elevating Work Platforms (hereafter known as MEWPs).

It is applicable to MEWPs, as defined in ISO 16368, which are intended to move persons to positions where they can carry out work from the work platform.

NOTE If national regulations are more stringent, they take precedence over the requirements of this International Standard.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 16368, *Mobile elevating work platforms — Design calculations, safety requirements and test methods*

ISO 18893, *Mobile elevating work platforms — Safety principles, inspection, maintenance and operation*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 16368, ISO 18893 and the following apply.

3.1

trainer

qualified person who conducts the training of the MEWP operator

3.2

examiner

qualified person who tests the competency of the trainee

3.3

familiarization

demonstration of the control functions, safety devices and specific features of a particular model of MEWP to a trained operator

4 Safe use of the MEWP

This International Standard shall be used in conjunction with ISO 18893, which is focused on safe use of MEWPs in all its aspects, not merely operator training.

SS-ISO 18878:2004

5 Requirements to train and authorize operator

5.1 Authorization to operate

Only properly trained and authorized personnel shall operate a MEWP.

5.2 Responsibility to train

The custodian of the MEWP is responsible for either training the operator or seeing that the operator is trained or having proof that the operator has been trained in accordance with this International Standard.

6 Contents of training

6.1 Primary training

The operator shall be trained on the following subjects:

- a) selection of an appropriate MEWP;
- b) purpose and use of operator's manuals, warnings and instructions and custodian's safety rules;
- c) pre-start inspection (see ISO 18893);
- d) factors affecting stability (see ISO 18893);
- e) common hazards and their avoidance (see ISO 18893);
- f) workplace inspection (see ISO 18893);
- g) general knowledge of the intended purpose and function of all MEWP controls, including emergency controls;
- h) use of personal protective equipment appropriate to the task, worksite and environment;
- i) safe travelling;
- j) transport (if appropriate);
- k) securing the MEWP from unauthorized use;
- l) use of a malfunctioning MEWP;
- m) actual operation of the MEWP.

Under the direction of a qualified person, the trainee shall operate the MEWP for a sufficient period of time to demonstrate proficiency in the actual operation of the MEWP.

NOTE Local conditions may require that other subjects be added.
