## SS-ISO 7867-2:2005

### Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 7867-2 was prepared by Technical Committee ISO/TC 31, *Tyres, rims and valves*, Subcommittee SC 5, *Agricultural tyres and rims*.

This second edition cancels and replaces the first edition (ISO 7867-2:1996), which has been technically revised. It also incorporates the Technical Corrigendum ISO 7867-2:1996/Cor.1:1996.

ISO 7867 consists of the following parts, under the general title *Tyres and rims (metric series) for agricultural tractors and machines*:

- *Part 1: Tyre designation, dimensions and marking, and tyre/rim coordination*
- *Part 2: Service description and load ratings*

# Tyres and rims (metric series) for agricultural tractors and machines —

## Part 2: Service description and load ratings

### 1 Scope

This part of ISO 7867 establishes the service description, the tyre load ratings in basic and special applications, and reference inflation pressure increments for the metric series of tyres primarily intended for agricultural tractors and machines.

It applies to bias-belted, diagonal and radial tyres mounted on 5° tapered rims, as specified in ISO 4251-3. It also applies to different concepts and types of tyres and rims; in these cases, however, appropriate load/speed curves and reference inflation pressure increments will be established and added.

Basic tyre load-carrying capacities for ranges of existing tyres are given in Annex A.

NOTE Designation and marking of the metric series are defined in ISO 7867-1. Tyres (ply rating marked series) and rims for agricultural tractors and machines are specified in ISO 4251-1 to ISO 4251-5. Service description (load index and speed symbol) marking of existing series of agricultural tractor-drive-wheel tyres is given in ISO 8664.

### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 4223-1, *Definitions of some terms used in the tyre industry — Part 1: Pneumatic tyres*

ISO 4251-3, *Tyres (ply rating marked series) and rims for agricultural tractors and machines— Part 3: Rims*

ISO 7867-1, *Tyres and rims (metric series) for agricultural tractors and machines — Part 1: Tyre designation, dimensions and marking, and tyre/rim coordination*

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 4223-1 and ISO 7867-1 apply.

### 4 Service description

#### 4.1 General

The service description shall be indicated as follows:

load index      speed symbol

**SS-ISO 7867-2:2005**

**4.2 Load index**

The load index is a numerical code related to the maximum load a tyre can carry at the speed indicated by its speed symbol under service conditions specified by the tyre manufacturer.

The correlation between load indices and tyre load-carrying capacities shall be as given in Table 1.

**Table 1 — Load indices (LI) and load-carrying capacities (TLCC)**

LI	TLCC kg	LI	TLCC kg	LI	TLCC kg	LI	TLCC kg	LI	TLCC kg
0	45	40	140	80	450	120	1 400	160	4 500
1	46,2	41	145	81	462	121	1 450	161	4 625

39	136	79	437	119	1 360	159	4 375	199	13 600

### 4.3 Speed symbol

The speed symbol is a symbol indicating the speed at which the tyre can carry a load corresponding to its index under service conditions specified by the tyre manufacturer.

The correlation between speed symbols and reference speeds shall be as given in Table 2.

## 5 Tyre load ratings

### 5.1 Basic tyre load

Basic tyre load is the tyre load-carrying capacity indicated by the tyre's load index at the reference speed indicated by the tyre's speed symbol.

When used as dual tyres, the load per tyre shall be reduced to 88 % of the single tyre load.

For basic tyre loads for ranges of existing tyres, see Annex A.

### 5.2 Tyre applications other than at reference speed

For applications without high and sustained torques, including road transport, the load/speed relationship is given in Table 2.

The tyre manufacturer concerned shall be consulted for the actual pressure to be used when applying the load/speed relationship given in Table 2.

The rim/wheel manufacturer shall be consulted for confirmation of the strength of the rim/wheel for the intended service.

**Table 2 — Load/speed relationship**

Speed symbol	Service speed <sup>a</sup> km/h	Maximum tyre load (%) at service speed Speed symbol				
		A2	A6	A8	B	D
A2	<b>10</b>	<b>100</b>	140	150	150	150
	15	94	130	134	134	134
	20	89	120	123	123	123
	25	84	107	111	111	118,5
A6	<b>30</b>	80	<b>100</b> <sup>b</sup>	107 <sup>b</sup>	107 <sup>b</sup>	115 <sup>b</sup>
	35	76	90	103	103	112
A8	<b>40</b>	73	80	<b>100</b>	100	109,5
	45			96	100	107
B	<b>50</b>			91	<b>100</b>	105
	55					103
	60					101,5
D	<b>65</b>					<b>100</b>
	70					91

<sup>a</sup> Reference speed is given in bold characters.

<sup>b</sup> This applies for all field applications with high and sustained torque.

## SS-ISO 7867-2:2005

### 5.3 Tyre application on combine harvesters (A8 tyres only)

On combine harvesters in cyclic loading application, except hillside combines, a load of up to 170 % of the basic tyre loads is permitted for speeds up to 10 km/h with an inflation pressure increase of approximately 30 % (consult the tyre manufacturer). This load increase shall include all possible field and user modifications that increase the vehicle mass and shall apply only to load increases which occur during the harvesting process.

For hillside operations over 11° (22 %) slope, only the basic tyre loads are permitted.

The rim and wheel manufacturer shall be consulted concerning the strength of the wheels.

## 6 Reference inflation pressures

The following reference inflation pressures are recommended for basic tyre loads of different ranges of tyres (metric series) for agricultural tractors and machines.

- 100 kPa
- 120 kPa
- 140 kPa
- 160 kPa
- 200 kPa
- 240 kPa
- 280 kPa
- 320 kPa
- 360 kPa
- 400 kPa
- 440 kPa

NOTE These reference inflation pressures are for basic tyre loads of different ranges of metric agricultural tyres. Operating pressures can be different.
