Household high-fidelity audio equipment and systems—
Methods of measuring and specifying the performance —

Part 6: Listening tests on loudspeakers — Single stimulus ratings and paired comparisons
Publication numbering

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series. For example, IEC 34-1 is now referred to as IEC 60034-1.

Consolidated editions

The IEC is now publishing consolidated versions of its publications. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

Further information on IEC publications

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology. Information relating to this publication, including its validity, is available in the IEC Catalogue of publications (see below) in addition to new editions, amendments and corrigenda. Information on the subjects under consideration and work in progress undertaken by the technical committee which has prepared this publication, as well as the list of publications issued, is also available from the following:

- IEC Web Site (www.iec.ch)
- Catalogue of IEC publications
  The on-line catalogue on the IEC web site (www.iec.ch/searchpub) enables you to search by a variety of criteria including text searches, technical committees and date of publication. On-line information is also available on recently issued publications, withdrawn and replaced publications, as well as corrigenda.
- IEC Just Published
  This summary of recently issued publications (www.iec.ch/online_news/justpub) is also available by email. Please contact the Customer Service Centre (see below) for further information.
- Customer Service Centre
  If you have any questions regarding this publication or need further assistance, please contact the Customer Service Centre:

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.

2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.

3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.

4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.

5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.

6) All users should ensure that they have the latest edition of this publication.

7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.

8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC 61305-6, which is a technical report, has been prepared by IEC technical committee 100: Audio, video and multimedia systems and equipment

The text of this technical report is based on the following documents:

<table>
<thead>
<tr>
<th>Enquiry draft</th>
<th>Report on voting</th>
</tr>
</thead>
<tbody>
<tr>
<td>100/855/DTR</td>
<td>100/905/RVC</td>
</tr>
</tbody>
</table>

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.
The committee has decided that the contents of this publication will remain unchanged until
the maintenance result date indicated on the IEC web site under "http://webstore.iec.ch" in
the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.
This technical report gives recommendations for establishing, conducting and evaluating listening tests.

The tests described in this report are to be performed in a room, the size and acoustical properties are similar to those of an average living room. Specific recommendations about the room size, acoustical properties, arrangement of loudspeakers and listeners, and environmental conditions are given.

This technical report describes experimental procedures, including recommendations on the choice of programme material and the processing and presentation of the final data. It may be useful to consider some of the recommendations in AES 20. It should be understood that the topics of experimental design, execution and statistical analysis are complex, and that only the most general guidelines can be given. It is recommended that professionals with expertise of experimental design and statistics should be consulted.

The use of multichannel formats, principally for domestic presentation of surround audio and cinema is becoming more usual. The procedures described in this report are applicable to any number of channels.

If the number of loudspeakers to be tested is high, the paired comparison listening test is lengthy because each loudspeaker has to be compared with the other. A shorter method is the single stimulus rating. With this method, each object is judged once. The rating is almost independent of the loudspeaker range in test. Each object is rated absolutely, whereas a paired comparison provides a relative ranking of the order of the loudspeakers in test.

Another technical report for listening test has been published as IEC 60268-13 and it is expected that the two technical reports should be combined in the maintenance work.
HOUSEHOLD HIGH-FIDELITY AUDIO EQUIPMENT AND SYSTEMS –
METHODS OF MEASURING AND SPECIFYING THE PERFORMANCE –

Part 6: Listening tests on loudspeakers –
Single stimulus ratings and paired comparisons

1 Scope

This technical report applies to loudspeakers conforming to IEC 61305-5 and intended for home use.

The purpose of this report is, in addition to objective testing according to IEC 60268-5, to establish standards for comparison of the sound characteristics of various loudspeakers with each other.

Two test procedures are described:

– single stimulus ratings;
– paired comparisons.

The procedures described in this report are applicable to any number of channels.

NOTE The test procedures are specified for stereo systems. They can be applied to multichannel systems accordingly.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61305-5, High fidelity audio equipment and systems; Minimum performance requirements – Part 5: Loudspeakers.

IEC 60268-5, Sound system equipment – Part 5: Loudspeakers.

ISO 3382, Acoustics – Measurement of the reverberation time of rooms with reference to other acoustical parameters.

3 Test preparation

3.1 Characteristics of the listening room

The volume of the listening room shall be 80 m$^3$ ± 20 m$^3$ with a room height of 2,75 m ± 0,25 m. The room should have a rectangular floor plan, whereby the ratio of the sides to each other should not exceed 2:1. A square floor plan is not permitted.
