Hitta rätt produkt och ett leveranssätt som passar dig

Standarder

Genom att följa gällande standard både effektiviserar och säkrar du ditt arbete. Många standarder ingår dessutom ofta i paket.

Tjänster

Abonnemang är tjänsten där vi uppdaterar dig med aktuella standarder när förändringar sker på dem du valt att abonnera på. På så sätt är du säker på att du alltid arbetar efter rätt utgåva.

e-nav är vår online-tjänst som ger dig och dina kollegor tillgång till standarder ni valt att abonnera på dygnet runt. Med e-nav kan samma standard användas av flera personer samtidigt.

Leveranssätt

Du väljer hur du vill ha dina standarder levererade. Vi kan erbjuda dig dem på papper och som pdf.

Andra produkter

Vi har böcker som underlättar arbetet att följa en standard. Med våra böcker får du ökad förståelse för hur standarder ska följas och vilka fördelar den ger dig i ditt arbete. Vi tar fram många egna publikationer och fungerar även som återförsäljare. Det gör att du hos oss kan hitta över 500 unika titlar. Vi har även tekniska rapporter, specifikationer och "workshop agreement".

Matriser är en översikt på standarder och handböcker som bör läsas tillsammans. De finns på sis.se och ger dig en bra bild över hur olika produkter hör ihop.

Standardiseringsprojekt

Du kan påverka innehållet i framtida standarder genom att delta i någon av SIS ca 400 Tekniska Kommittéer.

Find the right product and the type of delivery that suits you

Standards

By complying with current standards, you can make your work more efficient and ensure reliability. Also, several of the standards are often supplied in packages.

Services

Subscription is the service that keeps you up to date with current standards when changes occur in the ones you have chosen to subscribe to. This ensures that you are always working with the right edition.

e-nav is our online service that gives you and your colleagues access to the standards you subscribe to 24 hours a day. With e-nav, the same standards can be used by several people at once.

Type of delivery

You choose how you want your standards delivered. We can supply them both on paper and as PDF files.

Other products

We have books that facilitate standards compliance. They make it easier to understand how compliance works and how this benefits you in your operation. We produce many publications of our own, and also act as retailers. This means that we have more than 500 unique titles for you to choose from. We also have technical reports, specifications and workshop agreements.

Matrices, listed at sis.se, provide an overview of which publications belong together.

Standardisation project

You can influence the content of future standards by taking part in one or other of SIS's 400 or so Technical Committees.

Den internationella standarden ISO 21213:2008 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 21213:2008.

The International Standard ISO 21213:2008 has the status of a Swedish Standard. This document contains the official English version of ISO 21213:2008.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 21213 was prepared by Technical Committee ISO/TC 204, *Intelligent transport systems*.

Introduction

This International Standard is part of a family of International Standards for communications access for land mobiles (CALM) which specify a common architecture, network protocols and communications interface definitions for wireless communications using different bearer technologies, e.g. second and third generation cellular, 5 GHz microwave, 60 GHz millimetre-wave, mobile wireless broadband, and Infra-red communications. Other air interfaces may be added at a later date. These wireless communications interfaces are designed to provide parameters and protocols for broadcast, point-point, vehicle-vehicle, and vehicle-point communications in the ITS Sector.

This International Standard determines the air interface parameters for CALM communications via 3G cellular networks.

CALM standards are explicitly designed to enable quasi-continuous communications as well as communications of protracted duration between vehicles and service providers, and between vehicles.

The fundamental advantage of the CALM concept over traditional systems is the ability to support media independent handover (MIH), also referred to as heterogeneous handover, between the various media supported by CALM (e.g., cellular, microwave, mobile wireless broadband, infra-red, DSRC). Selection policies are supported that include user preferences and media capabilities in making decisions as to which media to use for a particular session, and when to handover between media or between service providers on the same medium. These handover mechanisms are defined within the CALM architecture International Standard (ISO 21217), the CALM networking protocols International Standard (ISO 21210), the CALM medium service access points International Standard (ISO 21218) and the CALM interface manager International Standard (ISO 24102). Handovers between access points using the same technology and service provider use mechanisms that are defined within the particular medium specific CALM Standard.

ITS applications include the update of roadside telemetry and messaging, internet, image and video transfer, infotainment, multimedia multicast, traffic management, monitoring and enforcement in mobile situations, route guidance, car-to-car and point-to-multipoint safety messaging, maintenance management, and “yellow page” services among others.

This International Standard provides definitions and procedures for the establishment and maintenance of an ITS communications session within a CALM system environment using 3G cellular communications.

Intelligent transport systems — Communications access for land mobiles (CALM) — 3G Cellular systems

1 Scope

This International Standard determines the air interface options applicable to CALM using third generation (3G) cellular networks. In particular, this International Standard specifies protocols and parameters that 3G systems shall include to support prolonged, long-range, high data rate wireless communication links in ITS environments where heterogeneous handovers or media independent handovers (MIH) are either necessary to maintain the link, or desirable, as determined by media selection policies.

This International Standard provides protocols and parameters for long range, medium speed wireless communications in the ITS sector using third generation cellular communications.

Wherever practicable, this International Standard has been developed by reference to suitable extant Standards, adopted by selection. Required regional variations are provided.

Specifically, for this International Standard, extant 3G systems, as defined by various international and national Standards, are adopted by reference.

Application specific upper layers are not included in this Standard, but will be driven by application standards (which may not be technology specific).

2 Conformance

In order to claim conformance with this International Standard, cellular communication shall be established in full compliance with local telecommunications procedures and protocols for the appropriate 3G standards, and shall comply with the requirements of ISO 21217 (CALM System architecture), ISO 21210 (CALM Networking protocols), ISO 21218 (CALM medium service access points), and CALM interface manager (ISO 24102).

3 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 21210, *Intelligent transport systems — Communications access for land mobiles (CALM) — Networking Protocols*

ISO 21217, *Intelligent transport systems — Communications access for land mobiles (CALM) — Architecture*

ISO 21218, *Intelligent transport systems — Communications access for land mobiles (CALM) — Medium service access points*

ANSI/TIA-136-A, *Mobile Station-Base Station Compatibility Standard for Wideband Spread Spectrum Cellular Systems*

TIA/EIA/IS-54-C, *Cellular System Dual-Mode Mobile Station-Base Station Compatibility Standard*

3GPP/3GPP2, *3GPP/3GPP2 Standards as they relate to 2G/2.5G*

SS-ISO 21213:2008 (E)**4 Terms and definitions**

For the purposes of this document, the terms and definitions given in ISO 21217 apply.

5 Abbreviated terms

Abbreviated terms used in this document are listed below. Reference should also be made to ISO 14817.

CALM	communications access for land mobiles
CDMA	code division multiple access
Cdma2000	code division multiple access 2000
DSRC	dedicated short range communication
GSM	global system for mobile communications
MMAE	media management adaptation entity
TDD	time division duplex
TIA	telecommunications industry association
UMTS	universal mobile telecommunications system
ULTRA	UMTS terrestrial radio access
W-CDMA	wideband code division multiple access
3GPP	third generation partnership project
3GPP2	third generation partnership project two

6 Requirements**6.1 Adoption of other standards and internationally adopted practices**

Equipment and systems complying to this International Standard shall operate in the environment of, and to the parameters defined for, 3G systems in one of the following sets of Standards and Internationally adopted practices:

- 3GPP Active specifications
- 3GPP2 Active specifications
- GSM-MAP
- W-CDMA
- cdma2000
- ANSI/TIA-41
- ULTRA-TDD
- ANSI/TIA-136.
