Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 18504:2017 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 18504:2017.

The International Standard ISO 18504:2017 has the status of a Swedish Standard. This document contains the official version of ISO 18504:2017.

© Copyright/Upphovsrätten till denna produkt tillhör SIS, Swedish Standards Institute, Stockholm, Sverige. Användningen av denna produkt regleras av slutanvändarlicensen som återfinns i denna produkt, se standardens sista sidor.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 190, *Soil quality*, Subcommittee SC 7, *Soil and site assessment*.

SS-ISO 18504:2018 (E)

Introduction

This document is intended to provide procedures for sustainable remediation. It contains accepted terminology and understanding of the features of sustainable remediation and of means of assessing the relative sustainability of site-specific alternative remediation strategies. Determining what is and is not sustainable remediation at a specific site will be influenced by many local factors and the governance context. Therefore, this document seeks to preserve local flexibility and freedom of action.

Soil quality — Sustainable remediation

1 Scope

This document provides procedures on sustainable remediation. In particular, it provides:

- standard methodology, terminology and information about the key components and aspects of sustainable remediation assessment;
- informative advice on the assessment of the relative sustainability of alternative remediation strategies.

This document is intended to inform practitioners about contemporary understanding of sustainable remediation. It is not intended to prescribe which methods of assessment, indicators or weights to use. Rather, it is intended to inform consideration of the concept of sustainable remediation in a local legal, policy, socio-economic and environmental context.

The scope of this document is restricted to sustainable remediation — that is demonstrably breaking the source-pathway-receptor linkages — in a manner that has been shown on a site-specific basis under a specific legal context to be sustainable.

The concepts of “green remediation” and “green and sustainable remediation” (so called GSR) that in some parts of the world are conflated with sustainable remediation are neither endorsed nor discussed in this document.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

brownfield

sites which

- have been affected by former uses of the site or surrounding land;
- are derelict or underused;
- are mainly in fully or partly developed urban areas;
- require intervention to bring them back to beneficial use;
- may have real or perceived contamination problems

3.2

environmental justice

combination of environmental rights and environmental responsibilities that asserts that everyone has

SS-ISO 18504:2018 (E)

- a right to healthy places to live, work, play, learn and enjoy themselves;
- a right to a fair share of nature's benefits and ecosystem services, such as food and water;
- a responsibility to look after the planet for others and for future generations

3.3

indicator

single characteristic that represents a sustainability effect, whether benefit or negative impact, which may be compared across alternative remediation strategies, comprising one or more remediation techniques and/or institutional controls, to evaluate their relative performance

EXAMPLE Greenhouse gas emissions.

3.4

metric

measurement of an *indicator* (3.3)

EXAMPLE Tons/Tonnes CO₂.

3.5

remediation strategy

one or more remediation technologies and associated works that will meet specified contamination-related risk reduction objectives

3.6

remediation technology

technology that pre-processes, processes or post-processes the ground or contaminant as part of risk management

3.7

sustainable development

development that meets the needs of the present without compromising the ability of future generations to meet their own needs

Note 1 to entry: Sustainable development is about integrating the broader expectations of society as a whole of a high quality of life, health and prosperity with environmental justice and maintaining Earth's capacity to support life in all its diversity. These social, economic and environmental goals are interdependent and mutually reinforcing.

[SOURCE: ISO 26000:2010, 2.23, modified — The Note has been modified and the last sentence has been deleted]

3.8

sustainable redevelopment

component of *sustainable development* (3.7) that results in the return to use of abandoned, derelict, underused and potentially contaminated sites in a way that increases their environmental, economic, and social benefits

3.9

sustainable regeneration

component of *sustainable development* (3.7) that reverses the economic, social and environmental decline of places

3.10

sustainable remediation

elimination and/or control of unacceptable risks in a safe and timely manner whilst optimising the environmental, social and economic value of the work

3.11 threshold

limit of acceptability for an indicator that may not be crossed or carries an unacceptable consequence if it is crossed, such as regulatory non-compliance

3.12 unacceptable risk

level of risk that requires remediation

Note 1 to entry: The level of risk could be evaluated by comparison to a numeric threshold or by benchmarking against a narrative definition. Different levels of risk are deemed unacceptable in different countries or even by different laws within a country.

4 Abbreviations

BTU	British Thermal Units
CBA	cost benefit analysis
CCP	climate change potential
ESTCP	Environmental Security Technology Certification Program
GHG	greenhouse gas
GSR	green and sustainable remediation
LCA	life cycle assessment
MCA	multi-criteria analysis
MNC	multi-national corporation
RBLM	risk-based land management
SuRF	Sustainable Remediation Forum
US EPA	United States Environmental Protection Agency
WBCSD	World Business Council for Sustainable Development

5 Sustainable remediation, (re)development and regeneration

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs^[1] is considered to constitute sustainable development. In the case of brownfield sites, remediation is a prelude to physical redevelopment and ultimately socio-economic regeneration. Sustainable regeneration provides multiple benefits. For example, it empowers local communities, provides new employment opportunities, enhances the aesthetics of an area and supports environmental justice.

Since remediation often links into the beneficial redevelopment and reuse of a site, sustainable redevelopment is inherently connected with sustainable remediation.^[2] Considering the reuse of a site from the beginning of a remediation project is a fundamental component of sustainable remediation, and therefore sustainable remediation may act either as a natural precursor to, or as a subset of, sustainable redevelopment. Much value may be achieved through successfully integrating remediation into the redevelopment process to exploit synergies while minimizing costs and environmental impacts associated with bringing sites back to beneficial use.
