

SVENSK STANDARD

SS-ISO 20915:2018

Fastställt/Approved: 2018-11-23
Utgåva/Edition: 1
Språk/Language: engelska/English
ICS: 77.080.20

Beräkningsmetodik för livscykelinventering för stålprodukter (ISO 20915:2018, IDT)

Life cycle inventory calculation methodology for steel products (ISO 20915:2018, IDT)

Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 20915:2018 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 20915:2018.

The International Standard ISO 20915:2018 has the status of a Swedish Standard. This document contains the official English version of ISO 20915:2018.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 17, *Steel*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The life cycle inventory (LCI) of steel products is an important component in the support of life cycle assessments for a wide range of products and applications that contain steel or where steel is used to support the manufacture, production or delivery of products.

This document describes the methodology for the calculation of the steel life cycle inventories that can be applied to a wide range of steel products, and represents the main process routes for global steel production. This includes the extraction of raw materials from the earth through to the production of steel products at the factory gate, as well as provision for scrap recycling of steel products and the treatment of steel scrap. The methodology conforms to the principles and framework set out in ISO 14040:2006 and ISO 14044:2006 and demonstrates how these principles can be applied to steel product manufacture and steel recycling.

As illustrated in [Figure 1](#), the life cycle of steel products consists of the following stages:

- sourcing of natural resources (which includes mining, transportation and intermediate processing of raw materials) and ferrous scrap (recovered from both the manufacturing process and the end of life of final products);
- production of steel products at the steelworks;
- manufacturing of final products by downstream users, for example, by customers of the steel industry, such as automotive, construction and engineering industries;
- use of final products, where the environmental performance of the final product depends on the steel products being used; for example, the fuel (or energy) consumption of an automobile depends partly upon the weight of its steel components;
- recovery of material from the end of life of final products;
- recycling of ferrous scrap from both the manufacturing process and the end of life of final products to substitute the use of raw materials from the earth.

The schematic diagram of the full life cycle of steel is shown in [Figure 1](#). This document covers life cycle stages including sourcing of raw materials from the earth and ferrous scrap, production of steel products at the steelworks, and recycling of ferrous scrap. It does not cover the manufacturing of final products and the use of final products.

All global steel production is sourced from different ratios of ferrous scrap and primary ores. Therefore, an understanding of the value of steel recycling becomes a necessary part of the steel product LCI.

It is generally understood that the recycling of materials makes a positive contribution towards reducing resource consumption and energy requirements, and helps to avoid the potential impacts of raw materials extraction and processing. However, all recycling routes (including the processing and transport of recycled materials) carry environmental burdens and these can be quantified as part of a life cycle assessment.

A critical factor in the understanding of the benefits of materials recycling is the quality of the materials and products that can be produced from the recycled material. Where the recycled products can be made to the same inherent properties as those sourced from primary materials, this is described as closed loop recycling.

With the existing process and scrap quality controls, steel sourced from (scrap based) steel recycling can be made to the same specification as steels sourced from the (iron ore based) primary routes. The properties of the different steel grades are achieved through different alloying concepts as well as process steps, such as heat treatment. Steel metallurgy allows the control of alloying and tramp elements to achieve closed loop recycling.

Life cycle assessment can be used to quantify the potential benefits of recycling to conform to the guidance set out in ISO 14040:2006 and ISO 14044:2006.

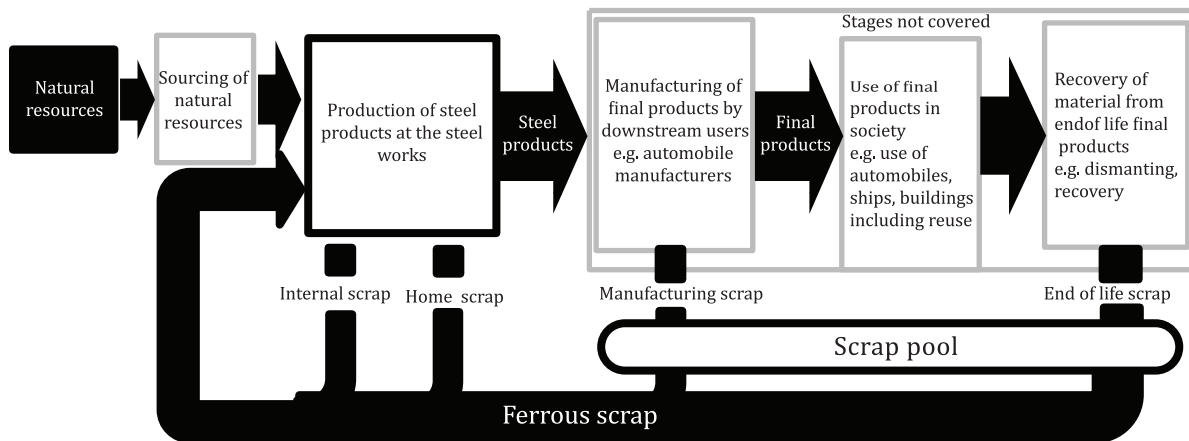

Figure 1 — Schematic diagram of the life cycle of steel

Life cycle inventory calculation methodology for steel products

1 Scope

This document specifies guidelines and requirements for conducting life cycle inventory (LCI) studies of steel products reflecting steel's capacity for closed-loop recycling, including:

- a) specification of the functional unit used for LCI calculation of steel products;
- b) definition of the system boundaries used for LCI calculation of steel products;
- c) evaluation of scrap in LCI calculation of steel products;
- d) evaluation of co-products in LCI calculation of steel products;
- e) reporting of LCI calculation results of steel products.

The application of LCI results, including life cycle impact assessment (LCIA), is outside the scope of this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 14044:2006, *Environmental management — Life cycle assessment — Requirements and guidelines*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1

steel product

product produced from steel and shipped out from steelworks

EXAMPLE Hot rolled steel, pickled hot rolled steel, cold rolled steel, finished cold rolled steel, electrogalvanized steel, hot-dip galvanized steel, tin-free steel, tinplated steel, organic coated steel, section, plate, rebar, engineering steel, wire rod, seamless pipe, UO pipe, welded pipe.

3.2

final product

product that requires no additional transformation prior to its use

EXAMPLE Automobiles, building structures, building envelopes, packaging.

[SOURCE: ISO/TS 18110:2015, 2.2, modified — The example has been added.]

3.3

scrap

iron and steel material in metallic form that is recovered in multiple life cycle stages, including steel production processes, the manufacturing processes of *final products* (3.2) and the end of life of final products, and is recycled as a raw material for steel production

3.4

internal scrap

scrap (3.3) from a crude steel making unit process that is then recycled within the same unit process [e.g. basic oxygen furnace (BOF) or electric arc furnace (EAF)]

3.5

home scrap

scrap (3.3) from a downstream steel production process within the steelworks (e.g. rolling, coating) that is returned to steel making processes (e.g. BOF or EAF)

3.6

manufacturing scrap

scrap (3.3) from the manufacturing processes of *final products* (3.2), such as automobiles and buildings

3.7

end of life scrap

scrap (3.3) from after the end of life of *final products* (3.2)

3.8

external scrap

scrap (3.3) provided from outside of the steelworks, including *manufacturing scrap* (3.6) and *end of life scrap* (3.7)

3.9

recycling rate

ratio of the mass of *external scrap* (3.8) recycled to the mass of steel products to be shipped out from the steelworks gate

3.10

end of life recycling rate

ratio of the mass of *end of life scrap* (3.7) recycled to the mass of steel in *final products* (3.2)

3.11

manufacturing yield

ratio of the mass of steel contained in *final products* (3.2) to the total mass of *steel products* (3.1) used for manufacturing the final product

3.12

ferrous raw material

raw material from the earth that becomes one of the main constituents of *steel products* (3.1), and which may have undergone intermediate processing to prepare it for ironmaking

EXAMPLE Lump ore, iron ore fine, sinter, pellet, hot briquetted iron (HBI), direct reduced iron (DRI).

3.13

process coal

coal used in iron and steel making processes

EXAMPLE Coking coal, injection coal, sintering coal, BOF coal, EAF coal, DRI coal.

3.14

non-ferrous raw material

non-ferrous ingredient material for *steel products* (3.1) other than *ferrous raw material* (3.12) or *process coal* (3.13)

EXAMPLE Zinc, tin, aluminium.

3.15**ferro alloy**

alloy of iron with non-iron alloy metals, such as manganese, silicon or chromium used in the steelmaking process

3.16**other input material**

material input and consumables for steel production other than *ferrous raw material* (3.12), *process coal* (3.13), *non-ferrous raw material* (3.14), *ferro alloy* (3.15) and *scrap* (3.3), which does not ultimately form part of the *steel product* (3.1)

EXAMPLE Refractory, electrode, chemical materials, limestone, dolomite.

3.17**fuel**

energy source for generating heat, steam and power other than *process gas* (3.20)

EXAMPLE Boiler coal, fuel oils, natural gas, LPG.

3.18**industrial gas**

gas for steel production other than *fuels* (3.17) or reducing agent

EXAMPLE Oxygen, nitrogen, argon, hydrogen, carbon dioxide, compressed air.

Note 1 to entry: Hydrogen can be used as a fuel, or is included here as an industrial gas when used as an uncombusted industrial gas, e.g. for the provision of reducing atmospheres in production processes.

3.19**co-product**

any of two or more products coming from the same unit process or product system

[SOURCE: ISO 14044:2006, 3.10]

3.20**process gas**

gas that is produced as part of the processes on the steel production site

EXAMPLE Coke oven gas, blast furnace gas, BOF gas.

3.21**waste**

materials disposed of in landfills, both internal and external to steel works, or incinerated

4 Basic conditions for LCI of steel products

4.1 General requirements

The requirements and guidelines set in this document shall be followed in addition to those set by ISO 14040:2006 and ISO 14044:2006.

4.2 Function and functional unit

The function of steel products is to form a part of final products, such as automobiles, cans and bridges.

For a LCI of steel products, the functional unit should be set as a mass-based unit of steel products to be shipped out from the steelworks gate. Where applications are based on other functional capacities, suitable explanation and conversion guidance shall be provided.
