**Motorbränslen – Fettsyrametylestrar (FAME) för dieselmotorer och värmeapplikationer – Krav och provningsmetoder**

**Liquid petroleum products – Fatty acid methyl esters (FAME) for use in diesel engines and heating applications – Requirements and test methods**

# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Europastandarden EN 14214:2012+A2:2019 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 14214:2012+A2:2019.

Denna standard ersätter SS-EN 14214:2012+A1:2014, utgåva 1 och SS-EN 14212:2012/AC:2014, utgåva 1 och SS-EN 14214:2012+A1:2014/AC:2014, utgåva 1.

The European Standard EN 14214:2012+A2:2019 has the status of a Swedish Standard. This document contains the official version of EN 14214:2012+A2:2019.

This standard supersedes the SS-EN 14214:2012+A1:2014, edition 1 and SS-EN 14212:2012/AC:2014, edition 1 and SS-EN 14214:2012+A1:2014/AC:2014, edition 1.

Denna rättade version inkluderar nationell bilaga NA med klimatbetingade krav.

This corrected version includes the national annex NA with national climate dependent requirements.

## Liquid petroleum products - Fatty acid methyl esters (FAME) for use in diesel engines and heating applications - Requirements and test methods

Produits pétroliers liquides - Esters méthyliques  
d'acides gras (EMAG) pour moteurs diesel et comme  
combustible de chauffage - Exigences et méthodes  
d'essai

Flüssige Mineralölerzeugnisse - Fettsäure-Methylester  
(FAME) zur Verwendung in Dieselmotoren und als  
Heizöl - Anforderungen und Prüfverfahren

This European Standard was approved by CEN on 10 November 2013 and includes Amendment 1 approved by CEN on 2013-11-10, Corrigendum 1 issued by CEN on 2014-10-01 and Amendment 2 approved by CEN on 2018-12-30.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## European foreword

This document (EN 14214:2012+A2:2019) has been prepared by Technical Committee CEN/TC 19 “Gaseous and liquid fuels, lubricants and related products of petroleum, synthetic and biological origin”, the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by August 2019, and conflicting national standards shall be withdrawn at the latest by August 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes A2 EN 14214:2012+A1:2014 A2.

This document includes Amendment 1 approved by CEN on 2013-11-10, Corrigendum 1 issued by CEN on 2014-10-01<sup>1</sup> and Amendment 2 approved by CEN on 2018-12-30.

The start and finish of text introduced or altered by amendment is indicated in the text by tags A1 A1 and A2 A2.

This document has originally been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association A2 *deleted text* A2.

A1 *Deleted text* A1

Significant technical changes between this European Standard and the previous edition are:

- extension towards distillate heating fuels. The former specification for FAME for heating fuel applications (EN 14213) also needed to be aligned, but effectively only one quality was supplied and required by heating fuel suppliers in the European market;
- A1 further clarification regarding the use of dyes and markers due to its new heating fuel application; A1
- an update of the specification in the perspective of blending at up to 10 % (V/V) of FAME in automotive diesel fuel;
- A1 removal of identification of parallel existence with EN 590 as FAME is being used for more than one blending purpose; A1
- discrimination between climate requirements for use for 100 % as fuel for diesel engines and for use as blend component in diesel fuel. This is done by introducing a new Table 3 for seasonal grades to be set nationally. It thus requires countries to present two sets of seasonal choices in a national annex to this standard;
- introduction of additional requirements for FAME for use as a blending component as a first, intermediate, step towards solving precipitation problems observed in the market during cold periods. Further work towards limitation of impurities, more specifically steryl-glycosides, and

---

<sup>1</sup> Amendment 2 completely replaces text of Corrigendum 1.

**SS-EN 14214:2012+A2:2019 (E)**

regarding monoglyceride determination is on-going. A performance test, such as a filterability test, is anticipated to solve this issue in the longer term;

- a decrease of the monoglycerides content limit from 0,8 % (m/m) to 0,7 % (m/m);
- deletion of the requirement on carbon residue as it is no longer considered necessary;
- an increase of the oxidation stability requirement from 6 h minimum to 8 h minimum;
- **A2** inclusion of new and revised test methods resulting from work under CEN/TC 19 and in cooperation with CEN/TC 307 **A2**;
- combination of all sub-clauses dealing with additives in one and aligning them with similar requirements in EN 590;
- **A1** a re-evaluation of Table A.1 has been executed and it was agreed to complete Annex A by presenting reproducibility information for all test methods that is mainly of interest to people **A2** handling the fuel **A2**; **A1**
- **A2** introduction of the new pump marking requirements as developed by CEN/TC 441;
- amalgamation of the B100 fuel climatic grades into one climatic table as most of the original arctic grades cannot be produced;
- alignment of the unit for water content with the reporting unit of the standard test method without changing the requirement;
- introduction of the new Procedure C for the flash point determination via updating of the test method standard;
- reference to recently developed CEN Technical Reports on cold operability testing and on cold filterability issues **A2**.

**A2** This second Amendment is to initiate a quick fix for the problems with applying EN 12662:2014 to B100 (referring back to previous standards) and to introduce reference to EN 16942 (fuel labelling). Next, new and revised determination methods are introduced, specifically the change of unit for the determination of water content is aligned with the effective reporting requirement. Those updates require that some methods of dispute (changes) are implemented. This is followed by updates to Annex A, wherein additional corrections for earlier omissions concerning viscosity and metals content are corrected as well. **A2**

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Introduction

This European Standard gives all relevant characteristics, requirements and test methods for fatty acid methyl esters (FAME), which are known at this time to be necessary to define the product to be used as automotive diesel fuel and in heating applications.

Many of the test methods included in this European Standard have been the subject of several interlaboratory testing to determine their applicability and their precision in relation to different sources of FAME. These FAMEs were produced from vegetable oils available in the market at the time, mainly rapeseed, palm, soy and sunflower oil. This does not imply any restrictions towards the feedstock for the fats and oils from which the FAME is made to comply with this European Standard (see Foreword).

**A2** Concerning total contamination, several studies have been executed and updates to the test method for biodiesel blends have been made, but work is still pending and therefore the optimal procedure and its repeatability and reproducibility for B100 have not yet been fully established. **A2**

Concerning cold temperature properties of diesel blends related to the quality of the FAME used as a blending component, strong indications towards the relationship with saturated mono-glycerides and steryl-glycosides have become known. As no test method to detect those components separately has yet been developed, an interim solution in setting CFPP and cloud point limitations has been included in this standard (see Table 3). A study within CEN has indicated that FAME conforms to the current precision statements of EN 116 and EN 23015.

Although there are technical indications that iodine value can be removed as an indication for FAME stability, relaxation at this time would be premature. Until the stability safeguards introduced by this revision have been proven in the market, it is maintained, also preventing unnecessarily high usage of anti-oxidant additives.

In order to meet the needs of the latest technology engines, lowering of the phosphorus limit and the limit of sodium and potassium is under investigation.

## 1 Scope

This European Standard specifies requirements and test methods for marketed and delivered fatty acid methyl esters (hereafter known as FAME) to be used either as fuel for diesel engines and for heating applications at 100 % concentration, or as an extender for distillate fuel for diesel engines in accordance with the requirements of EN 590 and for heating fuel. At 100 % concentration it is applicable to fuel for use in diesel engines and in heating applications designed or subsequently adapted to run on 100 % FAME.

NOTE For the purposes of this European Standard, the terms “% (m/m)” and “% (V/V)” are used to represent respectively the mass fraction,  $\mu$ , and the volume fraction,  $\varphi$ .
