# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Europastandarden EN ISO 16757-2:2019 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN ISO 16757-2:2019.

The European Standard EN ISO 16757-2:2019 has the status of a Swedish Standard. This document contains the official version of EN ISO 16757-2:2019.

© Copyright/Upphovsrätten till denna produkt tillhör SIS, Swedish Standards Institute, Stockholm, Sverige. Användningen av denna produkt regleras av slutanvändarlicensen som återfinns i denna produkt, se standardens sista sidor.

© Copyright SIS, Swedish Standards Institute, Stockholm, Sweden. All rights reserved. The use of this product is governed by the end-user licence for this product. You will find the licence in the end of this document.

*Upplysningar om sakinnehållet i standarden lämnas av SIS, Swedish Standards Institute, telefon 08-555 520 00. Standarder kan beställas hos SIS som även lämnar allmänna upplysningar om svensk och utländsk standard.*

*Information about the content of the standard is available from the Swedish Standards Institute (SIS), telephone +46 8 555 520 00. Standards may be ordered from SIS, who can also provide general information about Swedish and foreign standards.*

Denna standard är framtagen av kommittén för Bygg- och förvaltningsdokumentation, SIS/TK 269.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på [www.sis.se](https://www.sis.se) - där hittar du mer information.

EUROPEAN STANDARD

**EN ISO 16757-2**

NORME EUROPÉENNE

EUROPÄISCHE NORM

May 2019

ICS 91.010.01

English Version

## Data structures for electronic product catalogues for building services - Part 2: Geometry (ISO 16757-2:2016)

Structures de données pour catalogues  
électroniques de produits pour les services du  
bâtiment - Partie 2: Géométrie (ISO 16757-2:2016)

Datenstrukturen für elektronische Produktkataloge  
der Technischen Gebäudeausrüstung - Teil  
2: Geometrie (ISO 16757-2:2016)

This European Standard was approved by CEN on 19 May 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## European foreword

The text of ISO 16757-2:2016 has been prepared by Technical Committee ISO/TC 59 "Buildings and civil engineering works" of the International Organization for Standardization (ISO) and has been taken over as EN ISO 16757-2:2019 by Technical Committee CEN/TC 442 "Building Information Modelling (BIM)" the secretariat of which is held by SN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2019, and conflicting national standards shall be withdrawn at the latest by November 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

After the finalization of ISO 16757-2 and during the process of its adoption as a European standard, CEN/TC 442 has started to develop standards about the "level of information need" which include the "level of geometry". Throughout the lifecycle of a built asset, e.g. for a building, different levels of geometric information about the products are needed.

The product catalogue permits information to be exchanged in accordance with the required level of information need.

The various geometric levels of ISO 16757-2 support the inclusion of products in an information container according to a required level of geometry.

ISO 16757-2, 6.2, defines methods of providing multiple levels of geometry which, in accordance with industry experience, should be available in a product catalogue. For a clearer description of detail and the extent of geometry, users are advised to apply the upcoming standards that are being drafted by CEN/TC 442 as well:

prEN 17412 *Building Information Modelling - Level of Information Need - Concepts and principles*

prEN ISO 23386 *Building information modelling and other digital processes used in construction - Methodology to describe, author and maintain properties in interconnected dictionaries*

prEN ISO 23387 *Building Information Modelling (BIM) - Data templates for construction objects used in the life cycle of any built asset - Concepts and principles*

There are two planned parts of ISO 16757 which are also closely related to current projects of CEN/TC 442:

- Part 4 will describe the use of dictionaries for capturing the properties of products. Part 4 will be based on ISO 12006-3 and on the European standards EN ISO 23386 and EN ISO 23387 which are being developed in CEN/TC 442/WG 4.
- Part 5 will describe the catalogue exchange format. This format will be based on the work in CEN/TC 442/WG 2 to use IFC for the exchange of product data.

## SS-EN ISO 16757-2:2019 (E)

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

### **Endorsement notice**

The text of ISO 16757-2:2016 has been approved by CEN as EN ISO 16757-2:2019 without any modification.

## Introduction

There is a growing need for electronic, machine-readable, digital information about building services. The designers in building services have to execute detailed calculations and simulations to ensure saving of energy and to satisfy hygienic and comfort criteria in heating, ventilation, air conditioning, and sanitary plants. Designers must have access to more complete and more accurate documentation to address these needs. The resulting designs have to describe the complete building services system without internal interference to avoid collision with other systems and components and the building structure.

These requirements can only be achieved with modern building services applications such as computer-aided design (CAD) and computer-aided engineering (CAE) systems, calculation programmes, BIM tools, and management software. The software systems need exact data of the used plant components because each component contributes to the performance of the whole building.

Thus, an international standard is required to provide the models and definitions for product catalogue data exchange.

Such a standard eliminates the need to manage different data formats or to use different manufacturer-specific software systems to deal with products of different manufacturers. The standard will lead to a significant reduction of costs for manufacturers and users. Integrating this data into building information modelling (BIM) systems allows data interchange between information technology (IT) systems. In addition to the benefits of planning, there will be further advantages for other software solutions, such as facility management and life-cycle management.

This part of ISO 16757 offers for the first time an interface which allows the uniform handling of data about technical, maintenance and service, as well as geometry, images, video and text information.

The objectives of this part of ISO 16757 are to facilitate

- automatic integration of catalogue data of all manufacturers in engineering applications such as CAD, CAE, dimensioning and calculation systems,
- uniform product selection across manufacturers,
- dimensioning of products using manufacturers' algorithms,
- possibility to recalculate and re-simulate the whole system with data of all building services components as often as required, and
- standardized representation of technical data for data exchange and life-cycle management.

This part of ISO 16757 specifically provides definitions and specifications for modelling and exchanging geometric information of building services components.

ISO 16757-1 gives the overview about the standard and the rationale for its elements and organization. This document defines the geometric elements which are used to represent the products in ISO 16757 catalogues. ISO 16757-3 defines the script language used in ISO 16757 (all parts) for various purposes. ISO 16757-4 contains IDM descriptions for ISO 16757 (all parts), including process descriptions for those processes which are to be supported by the standard and it comprises the rules for mapping of product and the property descriptions to IFC and for defining properties semantically with IFD. ISO 16757-5 defines an exchange format in XML by which electronic catalogues can be exchanged according to the definitions of ISO 16757 (all parts). The exchange format will be specified as an XML Schema Definition (XSD). The content parts of ISO 16757 will define standardized properties for the product groups and the composition of the technical data model. Furthermore, the content parts of ISO 16757 determine the specific programming function-interfaces to layout, calculate and simulate the products.

# Data structures for electronic product catalogues for building services —

## Part 2: Geometry

### 1 Scope

This part of ISO 16757 describes the modelling of building services product geometry. The description is optimized for the interchange of product catalogue data and includes

- shapes for representing the product itself,
- symbolic shapes for the visualization of the product's function in schematic diagrams,
- spaces for functional requirements,
- surfaces for visualization, and
- ports to represent connectivity between different objects.

The shape and space geometry is expressed as Constructive Solid Geometry (CSG) based on geometric primitives concatenated to boundary representations by Boolean operations. This part of ISO 16757 uses the applicable primitives from ISO 10303-42 and from ISO 16739 and adds primitives which are required for the special geometry of building services products. For symbolic shapes, line elements are also used.

This part of ISO 16757 neither describes the inner structure and internal functionality of the product nor the manufacturing information because this is typically not published within a product catalogue.

Building services products can have millions of variant dimensions. To avoid the exchange of millions of geometries, a parametric model is introduced which allows the derivation of variant-specific geometries from the generic model. This is necessary to reduce the data to be exchanged in a catalogue to a manageable size. The parametric model will result in smaller data files, which can be easier transmitted during data exchanges.

The geometry model used does not contain any drawing information such as views, line styles or hatching.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
