# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Europastandarden EN 17294:2019 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 17294:2019.

The European Standard EN 17294:2019 has the status of a Swedish Standard. This document contains the official version of EN 17294:2019.

© Copyright/Upphovsrätten till denna produkt tillhör SIS, Swedish Standards Institute, Stockholm, Sverige. Användningen av denna produkt regleras av slutanvändarlicensen som återfinns i denna produkt, se standardens sista sidor.

English Version

**Animal feeding stuffs - Methods of sampling and analysis -  
Determination of organic acids by Ion Chromatography  
with Conductivity Detection (IC-CD)**

Aliments des animaux - Méthodes d'échantillonnage et  
d'analyse - Dosage des acides organiques par  
chromatographie ionique avec détection  
conductimétrique (CI-DC)

Futtermittel - Probenahme- und  
Untersuchungsverfahren - Bestimmung organischer  
Säuren mittels Ionenchromatographie mit  
Leitfähigkeitsdetektion (IC-CD)

This European Standard was approved by CEN on 24 June 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## **European foreword**

This document (EN 17294:2019) has been prepared by Technical Committee CEN/TC 327 “Animal feeding stuffs - Methods of sampling and analysis”, the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2020, and conflicting national standards shall be withdrawn at the latest by February 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a standardization request given to CEN by the European Commission and the European Free Trade Association.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **SS-EN 17294:2019 (E)**

### **Introduction**

Organic acids and their salts such as citric acid, formic acid, lactic acid, acetic acid, propionic acid, fumaric acid, benzoic acid and sorbic acid are animal feed additives which play an important role in animal feeding by improving the animals' performance and decreasing the development of (pathogenic) microorganisms in the intestine especially in the pig production. Concerning the feed legislation the substances can be used for different purposes depending on its functions and properties. According to their functional principle or their function, the relevant organic acid could be allocated within one or more of the functional groups mentioned in Annex I of Regulation (EC) no. 1831/2003 as preservative, acidity regulators, flavouring compounds, silage additives or other zoo-technical additives.

## 1 Scope

This document specifies a method for the determination of organic acids in animal feeding stuffs by Ion Chromatography with conductivity detection (IC-CD).

The method is intended to be used for the determination of formic acid, lactic acid, propionic acid, citric acid, fumaric acid and malic acid as active substances in feed additives, premixtures, feed materials, compound feed and water and for acetic acid in a limited manner in the same matrices. This method determines the total extractable concentration of the above mentioned organic acids and their salts.

It is advisable that the user of this standard determines the working range of the method for each organic acid. The lower limit of the working range depends on the matrix and the interferences encountered. It is advisable that a working range between 10 mg/l and 100 mg/l is achievable.

The method was successfully tested in an inter-laboratory study in concentrations between 0,02 % up to 27 % of the above mentioned organic acids.

NOTE Limitation occurs during simultaneous determination of high concentration of lactic acid and low concentration of acetic acid. If the ratio of concentration of lactic acid to acetic acid exceeds factor 20, the determination of acetic acid is not guaranteed.

On the basis of the referred working range, sample weight and extraction volume, limits of quantification (LOQ), as calculated (Table 1) can be achievable.

**Table 1 — Limits of quantification (LOQ)**

Organic acid	LOQ mg/kg
Formic acid	200
Lactic acid	200
Propionic acid	200
Citric acid	200
Fumaric acid	200
Acetic acid	200
Malic acid	200

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN ISO 3696, *Water for analytical laboratory use — Specification and test methods (ISO 3696)*

EN ISO 6498, *Animal feeding stuffs — Guidelines for sample preparation (ISO 6498)*

EN ISO 10304-1, *Water quality — Determination of dissolved anions by liquid chromatography of ions — Part 1: Determination of bromide, chloride, fluoride, nitrate, nitrite, phosphate and sulfate (ISO 10304-1)*

## SS-EN 17294:2019 (E)

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

#### 3.1

##### feed additives

substances, micro-organisms or preparations, other than feed material and premixtures, which are intentionally added to feed or water

[SOURCE: Regulation (EC) No 1831/2003/Article 2/2 a [1]]

#### 3.2

##### animal feeding stuffs

any substance or product, including additives, whether processed, partially processed or unprocessed, intended to be used for oral feeding to animals

[SOURCE: Regulation (EC) No 178/2002/Article 2/4 [2]]

### 4 Principle

The sample is extracted with water. The extract is filtered or centrifuged and – if necessary – diluted. The amount of organic acids extracted from the sample is determined with ion chromatography (IC) in conjunction with conductivity detection (CD) using external calibration.

When using CD it is essential that the eluent shows a sufficiently low conductivity. For this reason, CD is usually combined with a suppressor device (cation exchanger), which will reduce the conductivity of the eluent and transform the sample acids into their respective salts.

The method description follows a proven approach where the chromatographic resolution  $R$  shall be checked to ensure that it complies with the required separation conditions in accordance with EN ISO 10304-1.

**WARNING** — The use of this European Standard can involve hazardous materials, operations and equipment. This standard does not purport to address all the safety problems associated with its use. It is the responsibility of the user of this European Standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

### 5 Reagents

Use only reagents of recognized analytical grade, unless otherwise specified.

**5.1 Water**, grade 1 in accordance with EN ISO 3696

**5.2 Formic acids, lactic acid, propionic acid, citric acid, acetic acid, malic acid standard solution**,  $c = 1\ 000$  [mg/l]

Single acids standard solutions with adequate and required specification are commercially available (ready-to-use solutions).

### 5.3 Alternative preparation of stock solution based single standard substances

NOTE Differentiation between the enantiomers (D, L, DL) is not of interest.

**5.3.1 Citric acid**, minimum 99 % purity.

**5.3.2 Malic acid**, minimum 99 % purity.

**5.3.3 Formic Acid**, minimum 98 % purity.

**5.3.4 Lactic acid**, minimum 85 % purity.

NOTE Lithium Lactate, minimum 95 % purity, can also be used.

**5.3.5 Acetic acid**, minimum 99 % purity.

**5.3.6 Fumaric acid**, minimum 99 % purity.

**5.3.7 Propionic acid**, minimum 99 % purity.

**5.3.8 Single standard stock solutions**, app. 2 500 [mg/l].

Weigh 250 mg acid (5.3.1 to 5.3.7) each into a 100 ml volumetric flask. Dissolve with approximately 80 ml water (5.1), mix and fill up to the mark with water (5.1).

For fumaric acid weigh 250 mg (5.3.6) into a 100 ml volumetric flask. Add 80 ml water (5.1) and dissolve 10 min in an ultrasonic bath at 60 °C. After cooling to room temperature fill up to the mark with water.

The maximum storage time is 6 month at 4 °C.

NOTE Addition of 1 % Isopropanol has a positive effect on the stability of this solution.

Determine the exact concentration of the stock solution using the reference standard purity value provided by the supplier according to Formula (1):

$$C_s = \frac{m \times P}{V} \quad (1)$$

where

$C_s$  is the experimental concentration of the organic acid in the standard stock solution, in mg/ml;

$P$  is the purity of the organic acid standard given by the supplier in percent divided by 100;

NOTE For example 0,98.

$m$  is the weighed mass of the organic acid, in mg;

$V$  is the volume of the volumetric flask, in ml.

**5.4 Mixed standard solution**, (app.) 100 [mg/l]

Accurately pipette 4,0 ml of each single standard stock solution (5.3.8) into a 100 ml volumetric flask and fill up to the mark with water (5.1). The exact concentration of each organic acid shall be calculated according to the real concentration of the single standard stock solutions.

In the case of ready-to-use solutions (5.2) pipette 10,0 ml each into a 100 ml volumetric flask and fill up to the mark with water (5.1).

The maximum storage time is 2 months at 4 °C.
