Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 14034:2016 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 14034:2016.

The International Standard ISO 14034:2016 has the status of a Swedish Standard. This document contains the official version of ISO 14034:2016.

SS-ISO 14034:2017 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is Technical Committee ISO/TC 207, *Environmental management*, Subcommittee SC 4, *Environmental performance evaluation*.

In the development of this document, ISO Guide 82 has been taken into account in addressing sustainability issues.

Introduction

The objective of environmental technology verification (ETV) is to provide credible, reliable and independent verification of the performance of environmental technologies. An environmental technology is a technology that either results in an environmental added value or measures parameters that indicate an environmental impact. Such technologies have an increasingly important role in addressing environmental challenges and achieving sustainable development.

ETV contributes to protection and conservation of the environment by promoting and facilitating market uptake of innovative environmental technologies, especially those that perform better than relevant alternatives. ETV is particularly applicable to those environmental technologies whose innovative features or performance cannot be fully assessed using existing standards. Through the provision of objective evidence, ETV provides an independent and impartial confirmation of the performance of an environmental technology based on reliable test data. ETV aims to strengthen the credibility of new, innovative technologies by supporting informed decision-making among interested parties.

ETV was established in the United States in 1995, and similar programmes were later introduced in other countries, including Canada, several European Union member states, Japan, South Korea and the Philippines. The performance of many environmental technologies has since been verified in these countries under ETV programmes established at either the national or international level. Interest in joint, mutually recognized verifications performed under different ETV programmes has increased over the past decade. In 2008, the International Working Group on ETV (IWG-ETV), composed of international experts representing institutions operating an ETV scheme in Canada, the United States, Japan, South Korea, the Philippines and the European Union, was established with the aim of exploring ways to accelerate international harmonization and mutual recognition of ETV programmes. The IWG-ETV reached a consensus that standardization of the ETV process by means of an International Standard is an appropriate way to establish the credibility and robustness of ETV world-wide.

Environmental management — Environmental technology verification (ETV)

1 Scope

This document specifies principles, procedures and requirements for environmental technology verification (ETV).

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 17020:2012, *Conformity assessment — Requirements for the operation of various types of bodies performing inspection*

ISO/IEC 17025, *General requirements for the competence of testing and calibration laboratories*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <http://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1 Terms related to organization

3.1.1 organization

person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its objectives

Note 1 to entry: The concept of organization includes, but is not limited to, sole-trader, company, corporation, firm, enterprise, authority, partnership, charity or institution, or part or combination thereof, whether incorporated or not, public or private.

[SOURCE: ISO 14001:2015, 3.1.4]

3.1.2 verifier

organization (3.1.1) that performs *environmental technology verification* (3.3.5)

3.1.3 test body

organization (3.1.1) providing an environment for testing, test-implementation and means for performing and reporting on the testing of an *environmental technology* (3.3.4)

SS-ISO 14034:2017 (E)

3.1.4

applicant

organization (3.1.1) proposing a *technology* (3.3.1) for which *performance* (3.4.1) will be verified through an *environmental technology verification* (3.3.5)

EXAMPLE Technology developer; manufacturer; provider; legally authorized representative of the organization.

3.1.5

interested party

person or *organization* (3.1.1) being concerned with, affecting, being affected by, or perceiving itself to be affected by the results of *environmental technology verification* (3.3.5)

EXAMPLE Customer; user; community; supplier; developer; manufacturer; investor; regulator; non-governmental organization.

3.2 Terms related to verification

3.2.1

verification

confirmation through the provision of objective evidence

3.2.2

verification plan

planning document detailing the implementation of *environmental technology verification* (3.3.5)

3.2.3

verification report

document detailing *environmental technology verification* (3.3.5) and its results

3.2.4

verification statement

document summarizing the results of *environmental technology verification* (3.3.5)

3.2.5

test plan

planning document detailing the principles, test methods, conditions, procedures and *data quality* (3.2.6) required to carry out testing and to produce test data

3.2.6

data quality

characteristics of data that relate to their ability to satisfy stated requirements

[SOURCE: ISO 14040:2006, 3.19]

3.2.7

test report

document describing conditions and results of testing

3.3 Terms related to technology

3.3.1

technology

application of scientific knowledge, tools, techniques, crafts or systems in order to solve a problem or to achieve an objective which can result in a *product* (3.3.2) or *process* (3.3.3)

3.3.2

product

any goods or service

[SOURCE: ISO 14050:2009, 6.2, modified — Notes to entry have been deleted]

3.3.3

process

set of interrelated or interacting activities which transforms inputs into outputs

[SOURCE: ISO 14001:2015, 3.3.3]

3.3.4

environmental technology

technology (3.3.1) that either results in an *environmental added value* (3.3.7) or measures parameters that indicate an *environmental impact* (3.3.6)

3.3.5

environmental technology verification

verification (3.2.1) of the *performance* (3.4.1) of an *environmental technology* (3.3.4) by a *verifier* (3.1.2)

3.3.6

environmental impact

change to the environment, whether adverse or beneficial, wholly or partially resulting from material acquisition, design, production, use or end-of-use of a *technology* (3.3.1)

[SOURCE: ISO 14001:2015, 3.2.4, modified — The words “resulting from an organization’s environmental aspects” have been replaced by “resulting from material acquisition, design, production, use or end-of-use of a technology”.]

3.3.7

environmental added value

more beneficial or less adverse *environmental impact* (3.3.6) of a *technology* (3.3.1) with respect to the *relevant alternative* (3.3.8)

3.3.8

relevant alternative

technology (3.3.1) applied currently in a similar situation to the *environmental technology* (3.3.4) for which *performance* (3.4.1) will be verified through *environmental technology verification* (3.3.5)

3.4 Terms related to performance

3.4.1

performance

measurable result

Note 1 to entry: Performance relates to measurable results supported by numerical quantitative findings.

[SOURCE: ISO 14001:2015, 3.4.10, modified — Note 1 to entry has been modified and Note 2 to entry has been deleted because the definition refers to specific measurements related to technologies.]

3.4.2

performance claim

statement of *performance* (3.4.1) of the *environmental technology* (3.3.4) declared by the *applicant* (3.1.4)

3.4.3

performance parameter

numerical or other measurable factor of the *performance* (3.4.1) of a *technology* (3.3.1)
