# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Den internationella standarden ISO 24415-2:2011 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 24415-2:2011.

The International Standard ISO 24415-2:2011 has the status of a Swedish Standard. This document contains the official version of ISO 24415-2:2011.

*Uppllysningar om sakinnehållet i standarden lämnas av SIS, Swedish Standards Institute, telefon 08-555 520 00. Standarder kan beställas hos SIS Förlag AB som även lämnar allmänna uppllysningar om svensk och utländsk standard.*

*Information about the content of the standard is available from the Swedish Standards Institute (SIS), telephone +46 8 555 520 00. Standards may be ordered from SIS Förlag AB, who can also provide general information about Swedish and foreign standards.*

Denna standard är framtagen av kommittén för Gånghjälpmedel, SIS/TK 344/AG 5.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på [www.sis.se](http://www.sis.se) - där hittar du mer information.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 24415-2 was prepared by Technical Committee ISO/TC 173, *Assistive products for persons with disability*.

ISO 24415 consists of the following parts, under the general title *Tips for assistive products for walking — Requirements and test methods*:

- *Part 1: Friction of tips*
- *Part 2: Durability of tips for crutches*

## Introduction

The characteristics of tips attached to the bottom of assistive products for walking are essential to ensuring user safety. The tips are continuously and repeatedly subjected to load and friction while walking; durability against this repeated load is important both for safety and for cost effectiveness.

Tips are used on many different assistive products for walking, including canes, walking sticks, crutches, walking frames, rollators, and walking tables. They are produced in many different sizes and are made of many different materials, depending on the sort of assistive products for walking to which they are applied. A variety of bottom shapes are available on the market for the many kinds of assistive products for walking.

Generally, durability of rubber is estimated based on a wearing resistance test using test pieces rather than finished goods. However, tips for assistive products for walking are used in several different ways, therefore it is favourable to perform the test on manufactured tips (not manufactured test pieces) to obtain realistic data. For example, tips for crutches can endure less abrasion, because the load on tips for crutches is higher than that on tips for other assistive products for walking.

This part of ISO 24415 specifies requirements and test methods for durability of tips for crutches to enable developers, manufacturers, distributors, and health care providers to determine whether tips have the necessary durability.

# Tips for assistive products for walking — Requirements and test methods —

## Part 2: Durability of tips for crutches

### 1 Scope

This part of ISO 24415 specifies requirements and test methods for the durability of tips for crutches, and is not applicable to tips manufactured for special purposes. The requirements and test method are based on tips being used with an ordinary gait on dry and flat walking surfaces.

Crutches include elbow crutches, forearm support crutches, and axillary crutches, as described in ISO 9999.

NOTE Special purposes might include walking on ice and/or snow.

### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 9999, *Assistive products for persons with disability — Classification and terminology*

EN 13036-4, *Road and airfield surface characteristics — Test methods — Part 4: Method for measurement of slip/skid resistance of a surface — The pendulum test*

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

#### 3.1

##### **tip**

that part of the crutch which is in contact with ground

NOTE See Figure 1.

#### 3.2

##### **test track**

surface against which the tip is to be tested

#### 3.3

##### **actuator**

mechanism to produce the dynamic loading force

#### 3.4

##### **loading rod**

part onto which the tip is fixed and which transfers the loading force from the actuator to the tip

#### 3.5

##### **loading force**

force exerted on the tip along the longitudinal axis of the loading rod

**3.6 tilt angle**  
plane angle between the rod axis when tilted and the rod axis when perpendicular to the test track surface

**3.7 axis of relative rotation**  
axis about which the relative rotation between the tip and the test track takes place

**Key**  
1 tip

**Figure 1 — Tips**

## 4 Requirements

After having been tested, the condition of the tip shall be verified by inspection. No inner part shall be visible, no tear shall appear, and the tip shall be correctly fixed on the loading rod. All three tested samples shall fulfil the conditions mentioned above.

## 5 Apparatus

### 5.1 Test device

The test device consists of a test track, a motion control mechanism, a loading force mechanism and a load cell. Figure 2 shows a test track and a rod. A motion control mechanism and a loading force mechanism cooperate during the test. When the loading rod with the tip is in the upright position, perpendicular to the test track, the loading force is at its maximum. The whole test apparatus (including the load cell) shall be rigid.

### 5.2 Test track

The test track shall be a flat board, made of concrete. The test track shall be placed on a flat base during the test. Frictional characteristic of the surface on the test track is defined as “walkway surface traction” which shall be greater than 80 BPN when tested in accordance with EN 13036-4.
