Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 11096:2011 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 11096:2011.

The International Standard ISO 11096:2011 has the status of a Swedish Standard. This document contains the official version of ISO 11096:2011.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 11096 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 10, *Impact test procedures*.

This second edition cancels and replaces the first edition (ISO 11096:2002), which has been technically revised.

Introduction

The intent of this International Standard is to help standardize the pedestrian leg impactor test method that will allow a test organization to use the results from pedestrian impact tests conducted by other test organizations.

The method is based on the simulated impact of a motor vehicle on an adult pedestrian. It is anticipated that biomechanical data for children will later be studied in order to determine the potential for child pedestrian protection. Research suggests that safety improvements in vehicles derived from such pedestrian impact tests would also be beneficial to motorcyclists and bicyclists (see Annex D).

Road vehicles — Pedestrian protection — Impact test method for pedestrian thigh, leg and knee

1 Scope

This International Standard specifies a test method for simulating the lateral impact between the front of a passenger vehicle or light truck vehicle derived from passenger cars (as defined in ISO 3833) and an adult pedestrian.

The test method addresses the reduction of pedestrian thigh, leg and knee injuries. It is not applicable to testing for, or the evaluation of, injuries to other pedestrian body regions, nor does it directly cover the potential risk of injury to children or human soft tissue. It is not applicable to vehicles with deployable devices designed for activation in the event of impact with a pedestrian.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 1176, *Road vehicles — Masses — Vocabulary and codes*

ISO 3784, *Road vehicles — Measurement of impact velocity in collision tests*

ISO 3833, *Road vehicles — Types — Terms and definitions*

ISO 6487, *Road vehicles — Measurement techniques in impact tests — Instrumentation*

ISO/TR 15766, *Road vehicles — Pedestrian protection — Targets for the assessment of the biofidelity of pedestrian-leg test devices*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 1176 and ISO 3833, and the following apply.

3.1 Legform impactor

3.1.1

knee joint

mechanical joint of a legform impactor with deformable elements simulating a human knee in lateral impact only

3.1.2

thigh

mechanical components above the legform impactor knee joint

3.1.3

leg

mechanical components below the legform impactor knee joint

3.1.4

knee joint centre

centre of the bending part of a knee joint's deformable element before deformation

3.1.5

valgus angle

angle of the knee joint in abduction

3.2 Vehicle

3.2.1

impact point

point on the vehicle at which initial contact occurs

3.2.2

front face

foremost part of the front of the vehicle, and that most likely to strike the pedestrian's leg

3.2.3

corner

extremity on either side of the front face located at the point at which a vertical plane, set at 60° to the centreline of the vehicle, comes in contact with, and is tangential to, the outer surface of the front face

NOTE See Figure 1.

Key

- 1 straight edge
- 2 corner of front face
- 3 vehicle centreline

Figure 1 — Corner of front face

4 Test equipment

4.1 Impact test site

The impact test site shall consist of a flat, smooth and hard surface with a slope not exceeding 1 % under the test vehicle, as shown in Figure 2.

Key

- 1 impactor
- 2 ground reference plane (GRP)
- 3 ground
- 4 vehicle

Figure 2 — Impact test site
