# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Denna tekniska specifikation är inte en svensk standard. Detta dokument innehåller den engelska språkversionen av ISO/TS 11774:2011.

This Technical Specification is not a Swedish Standard. This document contains the English version of ISO/TS 11774:2011.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of document:

- an ISO Publicly Available Specification (ISO/PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO Technical Specification (ISO/TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TS 11774 was prepared by Technical Committee ISO/TC 135, *Non-destructive testing*, Subcommittee SC 7, *Personnel qualification*.

## Introduction

Performance demonstration establishes the ability of a specific examination system (i.e. equipment, procedures and personnel) to achieve a desirable level of performance. The pre-established criteria for acceptable performance are based on an industry obtaining desired test results on qualification specimens with or without discontinuities including an established acceptable false call rate using qualified procedures and equipment.

NOTE Wherever gender specific words such as “his”, “her”, “he” or “she” appear in this Technical Specification the other gender is also applicable.

# Non-destructive testing — Performance-based qualification

## 1 Scope

This Technical Specification provides a method for qualification of non-destructive testing (NDT) personnel, procedures, and equipment for specific non-destructive tests conducted in accordance with documented procedures established within a performance-based qualification programme.

Implementation of this Technical Specification requires cooperation between applicable industry sector committees (ISCs) and qualification bodies to ensure that specific performance expectations are addressed.

The qualification methodology described in this Technical Specification is based upon the ability of a candidate to demonstrate capability in detecting and sizing critical discontinuities equivalent to those to be detected and sized in the performance-based qualification programme as established by the ISC.

It is possible that second party (employer-based) qualification and approval (e.g. in accordance with ANSI/ASNT CP-189<sup>[3]</sup>) or qualification and third party certification (e.g. in accordance with ISO 9712<sup>[1]</sup> or EN 473<sup>[2]</sup>), followed by on-the-job training does not provide the required degree of confidence for safety critical inspections, and this Technical Specification provides criteria to assist in preparing an individual for performance-based qualification examinations.

Qualification to this Technical Specification is limited to the specific applications, using the specific documented procedure in the performance-based qualification programme.

## 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 17024, *Conformity assessment — General requirements for bodies operating certification of persons*

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

### 3.1

#### **candidate**

individual seeking qualification under a qualification procedure who has satisfied all prerequisites detailed in the qualification document

**NOTE** The qualification document is a description of the qualification system, including all applicable conditions, agreed between the parties to the qualification.

### 3.2

#### **certification body**

body that administers procedures for certification according to the requirements of this Technical Specification and which fulfils the requirements of ISO/IEC 17024

- 3.3 employer**  
legal entity for which the candidate for qualification or the qualified individual works on a regular basis
- 3.4 essential parameter**  
parameter of the NDT method, technique, the component, and defects that the test is intended to detect or characterize
- 3.5 false call**  
reporting a defect when none exists
- 3.6 grading unit**  
section of a qualification specimen
- NOTE Grading units can be of unequal lengths and spacing, and either with or without discontinuities.
- 3.7 industry sector committee**  
**ISC**  
body comprised of individuals representative of the interests in the inspection to be qualified
- 3.8 NDT qualification examiner**  
impartial individual who is certified to NDT level 3 within a scheme recognized by the qualification body, and who is qualified in the specific NDT application
- 3.9 NDT procedure**  
written description of all essential parameters and precautions to be applied when non-destructively testing products in accordance with standard(s), code(s) or specification(s)
- 3.10 performance-based qualification programme**  
methodology for establishing the ability of a specific qualification system (for equipment, procedures, and personnel) to achieve a required level of performance
- 3.11 qualification body**  
independent entity that administers qualification of NDT personnel, NDT equipment and NDT procedures
- 3.12 qualification certificate**  
document issued under the rules of a qualification system indicating that adequate confidence is provided that NDT procedures, equipment and personnel or any combination of these are capable, for a specific non-destructive test, of achieving the stated objectives
- 3.13 qualification procedure**  
orderly sequence of rules describing how a specific non-destructive test on a specific component is qualified
- 3.14 qualification specimen**  
example or a simulation of the component for which the non-destructive test is qualified which, as appropriate, replicates size, geometry, material properties and containing discontinuities to be encountered on site

## 4 Responsibilities

### 4.1 Qualification body

A qualification body shall develop and administer the qualification process, in accordance with the qualification procedure, and issue certificates of qualification upon compliance with this Technical Specification and ISC specific requirements.

### 4.2 Employer

An employer is responsible for authorizing employees to perform NDT for which they are qualified in compliance with this Technical Specification and ISC specific requirements.

### 4.3 Industry sector committee

An ISC establishes qualification requirements for specific industry applications, and advises the qualification body on all technical and procedural matters concerning the qualification.

## 5 Qualification of the NDT procedure

To ensure effective and consistent evaluation of personnel, the NDT procedure shall first be qualified in accordance with Annex A. The qualified procedure is valid only when the essential parameters are applied and controlled as defined within the procedure. The procedure qualification shall demonstrate the capability to resolve mandatory detectable discontinuities under representative conditions.

## 6 Prerequisites for performance-based qualification examinations

**6.1** To be permitted to continue with the performance-based qualification examination, the candidate shall fulfil either 6.1.1 or 6.1.2.

**6.1.1** The candidate shall provide evidence of current level 2 or 3 certification in the method(s) for which he is to be qualified under this Technical Specification. For NDT level 2 personnel, the certification may be from a nationally recognized employer-based programme or a certification body accepted by the ICS. For NDT level 3 personnel, the certification shall be from a certification body.

**6.1.2** The candidate shall satisfy the training and experience established by the ISC in 6.2 and successfully complete written examinations administered by a certification body approved by the ISC. The certification body accepted by the ISC shall confirm conformance with the foregoing.

**6.2.** Candidates for qualification shall have sufficient training and specific practical experience to ensure they are capable of performing non-destructive tests using the qualified NDT procedure. The experience may be obtained with the use of virtual training systems, or by examining representative specimens, that may be located in a laboratory, with relevant and non-relevant discontinuities that may be located in a laboratory, or analysing recorded data from automatic, digital or analogue systems.

## 7 Performance-based qualification examination

### 7.1 Qualification specimens

The ISC shall:

- specify the mandatory detectable discontinuities size and type, in consultation with the regulator, original equipment manufacturer or design authority where appropriate, using applicable codes, standards and engineering principles; and
- confirm that qualification specimens are consistent with the specification.
