Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Den internationella standarden ISO 13008:2012 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 13008:2012.

The International Standard ISO 13008:2012 has the status of a Swedish Standard. This document contains the official version of ISO 13008:2012.

SS-ISO 13008:2012 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 13008 was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 11, *Archives/records management*.

Introduction

This International Standard provides guidance for the conversion of records from one format to another and the migration of records from one hardware or software configuration to another. It contains applicable records management requirements, the organizational and business framework for conducting the conversion and migration process, technology planning issues, and monitoring/controls for the process. It also identifies the steps, components and particular methodologies for each of these processes, covering such topics as workflow, testing, version control and validation.

The development of this International Standard was derived from Reference [13].

With the rapid pace of technological change, many records in digital form will, at some point, need to be converted from one format to another, or migrated from one system to another to ensure their continued accessibility and processability.

This is not to suggest that conversion and migration are the only approaches to preserving digital records. Other methods, such as emulation, do exist or are under development. Conversion and migration are, however, two of the more prevalent methods of digital preservation at this time. While this International Standard does not address digital preservation per se, the conversion and migration processes can have an impact on a digital preservation strategy. How an organization chooses to set up the conversion and migration processes (which format to employ, the level of control needed, and so on) largely influences its view of the record. At the time of the development of this International Standard, no single preferred preservation method had been identified. However, institutions recognize the benefit of standardized procedures; many test beds and task forces have been established to explore and research conversion, migration, emulation and refreshment, among other preservation procedures, to determine what should work best.

Conversion and migration represent separate approaches to preserving digital records. It is important to implement them in a managed way to prevent any degradation or loss in the authenticity, reliability, integrity and usability of the records, thus ensuring an “authoritative record” as described in ISO 15489-1:2001, 7.2.2 to 7.2.5. This International Standard outlines the program components, planning issues, recordkeeping requirements and procedures for performing the conversion and migration of digital records so as to preserve their authenticity, reliability, integrity and usability so that they continue to act as evidence of business transactions.

From the outset, note that it is not necessary to adopt all of the procedures recommended in this International Standard to ensure that records management requirements are met. The decision regarding which procedures to adopt depends on such factors as the type of conversion or migration to be performed and the level of risk the organization is willing to accept. In addition, organizations would be well advised to incorporate future planning for further conversion and/or migration of records among requirements for managing enterprise electronic recordkeeping systems.

Before starting a conversion or migration project, individuals designated as “key” to the process need to be aware of records management requirements. The term “recordkeeping criteria/requirements” in records and information management means an adherence to a set of principles that relate to record integrity, authenticity, reliability and usability. Adherence to these principles ensures that record content, context and structure are maintained and that a given record’s standing as evidence of business activity is not compromised. The principles apply regardless of how long the record is retained.

This International Standard does not specifically address conversions and migrations as a routine, ongoing business-as-usual work.

SS-ISO 13008:2012 (E)

Information and documentation — Digital records conversion and migration process

1 Scope

This International Standard specifies the planning issues, requirements and procedures for the conversion and/or migration of digital records (which includes digital objects plus metadata) in order to preserve the authenticity, reliability, integrity and usability of such records as evidence of business transactions. These digital records can be active or residing in a repository.

These procedures do not comprehensively cover:

- backup systems;
- preservation of digital records;
- functionality of trusted digital repositories;
- the process of converting analogue formats to digital formats and vice versa.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 15489-1, *Information and documentation — Records management — Part 1: General*

ISO 23081-2, *Information and documentation — Managing metadata for records — Part 2: Conceptual and implementation issues*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 15489-1 and the following apply.

3.1

access

right, opportunity, means of finding, using, or retrieving information

[ISO 15489-1:2001, definition 3.1]

3.2

attribute

characteristic of an object or entity

NOTE Adapted from ISO/IEC 11179-3:2003.

3.3

authenticity

record that can be proven to be what it purports to be, to have been created or sent by the person purported to have created or sent it, and to have been created or sent at the time purported

NOTE This term is further described in ISO 15489-1:2001, 7.2.2.

SS-ISO 13008:2012 (E)

- 3.4**
content
subject information of a document

[IEC 82045-1:2001, definition 3.2.2]
- 3.5**
conversion
<record> process of changing records from one format to another while maintaining the characteristics of the records
- 3.6**
data cleansing
process of reviewing and correcting data to ensure data are in a standardized format

NOTE Correction may be carried out for incompleteness, incorrect formatting, obsolescence, duplication, etc. It is often done prior to merging data sets or converting data from one system/database to another.
- 3.7**
data object
discrete data, considered as a unit, representing an instance of a data structure that is known or assumed to be known

[ISO/IEC 2382-17:1999, definition 17.01.11]
- 3.8**
emulation
use of a data processing system to imitate another data processing system, so that the imitating system accepts the same data, executes the same programs, and achieves the same results as the imitated system

NOTE Adapted from ISO/IEC 2382-1:1993.
- 3.9**
encryption
(reversible) transformation of data by a cryptographic algorithm to produce ciphertext, i.e. to hide the information content of the data

NOTE Adapted from ISO/IEC 18033-1:2005.
- 3.10**
file format
encoding of a file type that can be rendered or interpreted in a consistent, expected and meaningful way through the intervention of a particular piece of software or hardware which has been designed to handle that format

NOTE A file may (or may not) be a container containing zero or more files of various formats. File formats may be defined by a specification, or by a reference software system. Many file formats exist in forms with minor variations and many also in more than one version. Typing of file formats should be interpreted generously rather than strictly, but sufficiently precisely to distinguish versions where such distinctions have significant interpretive consequences.

[PRONOM]
- 3.11**
integrity
quality of being complete and unaltered

NOTE This term is further described in ISO 15489-1:2001, 7.2.4.
- 3.12**
metadata
<records> data describing context, content, and structure of records and their management through time

[ISO 15489-1:2001, definition 3.12]

3.13

migration

⟨records⟩ process of moving records, including their existing characteristics, from one hardware or software configuration to another without changing the format

3.14

originating

initial manifestation of something

3.15

preservation

processes and operations involved in ensuring the technical and intellectual survival of authentic records through time

[ISO 15489-1:2001, definition 3.14]

3.16

preservation metadata

metadata that supports the viability, renderability, understandability, authenticity and identity of digital objects in a preservation context

[PREMIS Data Dictionary for Preservation Metadata, version 2.0, March 2008]

3.17

record

information created, received, and maintained as evidence and/or as an asset by an organization or person, in pursuance of legal obligations or in the transaction of business, regardless of medium, form or format

NOTE Adapted from ISO 15489-1:2001.

3.18

refreshment

data migration where the media is replaced with equivalent media such that all storage hardware and software functionality is unchanged

NOTE Adapted from ISO 14721:2003.

3.19

reliability

measure of the completeness and accuracy of the representation of transactions and activities, or of the facts to which they attest

NOTE This term is further described in ISO 15489-1:2001, 7.2.3.

3.20

replication

digital migration where there is no change to the packaging information, the content information, and the preservation description information

NOTE The bits used to represent these information objects are preserved in the transfer to the same or new media instance.

NOTE Adapted from ISO 14721:2003.

3.21

usability

⟨records⟩ property of being able to be located, retrieved, presented and interpreted

NOTE This term is further described in ISO 15489-1:2001, 7.2.5.
