# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Europastandarden EN 335:2013 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 335:2013.

Denna standard ersätter SS-EN 335-1:2006, utgåva 2; SS-EN 335-2:2006, utgåva 2 och SS-EN 335-3, utgåva 1.

The European Standard EN 335:2013 has the status of a Swedish Standard. This document contains the official version of EN 335:2013.

This standard supersedes the Swedish Standard SS-EN 335-1:2006, edition 2; SS-EN 335-2:2006, edition 2 and SS-EN 335-3, edition 1.

© Copyright/Upphovsrätten till denna produkt tillhör SIS, Swedish Standards Institute, Stockholm, Sverige. Användningen av denna produkt regleras av slutanvändarlicensen som återfinns i denna produkt, se standardens sista sidor.

© Copyright SIS, Swedish Standards Institute, Stockholm, Sweden. All rights reserved. The use of this product is governed by the end-user licence for this product. You will find the licence in the end of this document.

*Upplysningar om sakinnehållet i standarden lämnas av SIS, Swedish Standards Institute, telefon 08-555 520 00. Standarder kan beställas hos SIS Förlag AB som även lämnar allmänna upplysningar om svensk och utländsk standard.*

*Information about the content of the standard is available from the Swedish Standards Institute (SIS), telephone +46 8 555 520 00. Standards may be ordered from SIS Förlag AB, who can also provide general information about Swedish and foreign standards.*

Denna standard är framtagen av kommittén för Beständighet, SIS/TK 182/AG 3.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på [www.sis.se](http://www.sis.se) - där hittar du mer information.

EUROPEAN STANDARD

**EN 335**

NORME EUROPÉENNE

EUROPÄISCHE NORM

March 2013

ICS 71.100.50; 79.040

Supersedes EN 335-1:2006, EN 335-2:2006, EN 335-3:1995

English Version

## Durability of wood and wood-based products - Use classes: definitions, application to solid wood and wood-based products

Durabilité du bois et des matériaux à base de bois -  
Classes d'emploi: définitions, application au bois massif et  
aux matériaux à base de bois

Dauerhaftigkeit von Holz und Holzprodukten -  
Gebrauchsklassen: Definitionen, Anwendung bei Vollholz  
und Holzprodukten

This European Standard was approved by CEN on 5 February 2013.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## Foreword

This document (EN 335:2013) has been prepared by Technical Committee CEN/TC 38 “Durability of wood and wood-based products”, the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2013, and conflicting national standards shall be withdrawn at the latest by September 2013.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 335-3:1995, EN 335-1:2006 and EN 335-2:2006.

Compared to EN 335, parts 1 to 3, the main modifications are as follows:

- 1) the former three parts of EN 335 have been combined;
- 2) the subclasses 3.1 and 3.2 have been redefined;
- 3) the subdivision of use class 4 has been omitted.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Introduction

This standard gives general definitions of use classes for different service situations and is relevant to solid wood and wood-based products.

This standard gives information on the biological agents that can attack wood and wood-based products in defined situations.

The possibility of alignment between the three service classes of Eurocode 5 (EN 1995-1-1) and the five use classes of EN 335 has been carefully studied. It is important to note that the two systems use different criteria to achieve different results.

Annex A gives guidance on relationships between use classes and service classes.

Annex B gives additional information for the assignment of use classes.

Annex C gives information on biological agents.

## 1 Scope

This European Standard is applicable to solid wood and wood-based products.

This European Standard defines five use classes that represent different service situations to which wood and wood-based products can be exposed. This standard also indicates the biological agents relevant to each situation.

A use class is not a performance class and does not give guidance for how long wood and wood-based product will last in service.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 1001-2:2005, *Durability of wood and wood-based products — Terminology — Part 2: Vocabulary*

EN 1995-1-1, *Eurocode 5 — Design of timber structures — Part 1-1: General — Common rules and rules for buildings*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 1001-2:2005 and the following apply.

### 3.1

#### **service situation**

situation of exposure of the wood element in use

### 3.2

#### **wood-based product**

any products containing wood

Note 1 to entry: For instance solid wood panel, laminated veneer lumber (LVL), plywood, oriented strand board (OSB), resin-bonded particleboard, cement-bonded particleboard or fibreboard, modified wood are wood-based products.

## 4 Use classes: application to wood and wood-based products

### 4.1 General

The differences between the use classes are based on differences in environment exposures that can make the wood or wood-based products susceptible to biological deterioration.

NOTE Border line and extreme cases of use of wood and wood-based products exist. This can cause the assignment of a use class that differs from that defined in this standard (see Annex B).

### 4.2 Use class 1 (UC 1)

Situations in which the wood or wood-based product is inside a construction, not exposed to the weather and wetting.

The attack by disfiguring fungi or wood-destroying fungi is insignificant and always accidental.

**SS-EN 335:2013 (E)**

Attack by wood-boring insects, including termites, is possible although the frequency and importance of the insect occurrence depends on the geographical region<sup>1)</sup>.

**4.3 Use class 2 (UC 2)**

Situations in which the wood or wood-based product is under cover and not exposed to the weather (particularly rain and driven rain) but where occasional, but not persistent, wetting can occur.

In this use class, condensation of water on the surface of wood and wood-based products may occur.

Attack by disfiguring fungi and wood-destroying fungi is possible.

Attack by wood-boring insects, including termites, is possible although the frequency and importance of the insect risk depends on the geographical region<sup>1)</sup>.

**4.4 Use class 3 (UC 3)****4.4.1 General**

Situations in which the wood or wood-based product is above ground and exposed to the weather (particularly rain).

Attack by disfiguring fungi and wood-destroying fungi is possible.

Attack by wood-boring insects, including termites, is possible although the frequency and importance of the insect risk depends on the geographical region<sup>1)</sup>.

A large variety of in-use situations exists and, when relevant, use class 3 may be divided into two sub-classes use class 3.1 and use class 3.2.

NOTE Decay risk depends on the climatic and other in-use conditions (temperature, RH, rainfall, structural conditions, design details and maintenance provisions).

**4.4.2 Sub-class 3.1 (UC 3.1)**

In this situation the wood and wood-based products will not remain wet for long periods. Water will not accumulate.

NOTE This may be achieved by, for example, a maintained and suitable coating, or by design or orientation of components to shed water or to dry quickly.

**4.4.3 Sub-class 3.2 (UC 3.2)**

In this situation the wood and wood-based products will remain wet for long periods. Water may accumulate.

NOTE Components are not designed or orientated to shed water or dry quickly.

**4.5 Use class 4 (UC 4)**

A situation in which the wood or wood-based product is in direct contact with ground and/or fresh water.

Attack by disfiguring fungi and wood-destroying fungi is possible.

---

<sup>1)</sup> If national standards do not specify the risk of insect attack, local or national experts should be consulted for advice on the risk of insect attack.

Attack by wood-boring insects, including termites, is possible although the frequency and importance of the insect occurrence depends on the geographical region <sup>1)</sup>.

NOTE Wood and wood-based products which are constantly below water level or completely buried and fully saturated by water are not susceptible to be attacked by fungi but may be damaged by bacterial decay.

#### **4.6 Use class 5 (UC 5)**

A situation in which the wood or wood-based product is permanently or regularly submerged in salt water (i.e. sea water and brackish water).

Attack by invertebrate marine organisms is the principal problem, particularly in the warmer waters where organisms such as *Limnoria* spp., *Teredo* spp. and Pholads can cause significant damage. Attack by wood-destroying fungi and growth of surface moulds and staining fungi is also possible.

The above water portion of certain components, for example harbour piles, can be exposed to wood-boring insects.
